International Workshop on Formal Ontology

in Conceptual Analysis and
Knowledge Representation

17-19 March 1993
Padova, Italy

Edited by N. Guarino and R. Poli
Ladseb-CNR Internal Report 01/93

Organized by:

LADSEB-CNR - Institute for Systems Theory and Biomedical
Engineering of the Italian National Research Council - Padova
Centro Studi per la Filosofia Mitteleuropea - Trento

Sponsored by:

AI*IA - Italian Association for Artificial Intelligence
CNR - Special Project on "Sistemi Informatici e Calcolo Parallelo"
University of Padova
University of Trento

Program Committee:

Giuseppe Attardi, Dip. di Informatica, Pisa
Amedeo Cappelli, ILC-CNR, Istituto di Linguistica Computazionale, Pisa
Pierdaniele Giaretta, Istituto di Storia della Filosofia, Padova
Nicola Guarino (co-chair), LADSEB-CNR, Padova
Diego Marconi, Dip. di Ermeneutica Filosofica, Vercelli
Roberto Poli (co-chair), Dip. Teoria Storia e Ricerca Sociale, Trento

Preface

Problems of conceptual analysis and of the acquisition of common-sense knowledge still represent a major bottleneck in the development of information systems. In mature areas like databases as well as in more recent fields like knowledge engineering, the rigorous analysis of the domain and the choice among the available representation primitives are difficult tasks, appearing to rest on a mixture of introspection (as to what is intuitively right) and technical realization of the resulting theory. Existing knowledge acquisition tools tend to be oriented around applications, and therefore a new knowledge base must usually be constructed from scratch when a new problem is undertaken.

Due to the high costs of this process, recent initiatives like DARPA's Knowledge Sharing Efforts have underlined the opportunity of increasing the quality of formalized bodies of knowledge in such a way that it is possible to share and reuse at least parts of them for a variety of different purposes. The development of so-called generic ontologies plays an essential role in this connection.

The *International Workshop on Formal Ontology in Conceptual Analysis and Knowledge Representation*, to be held in Padova on March 17-19, 1993, will focus on the methods used to develop and analyse such ontologies, with a special emphasis on *formal ontology*, recently defined by Cocchiarella as "the systematic, formal, axiomatic development of the logic of all forms and modes of being". The idea is to bring together philosophers belonging to the tradition of Brentano and Husserl with people working on principles of knowledge representation and lexical semantics, as well as with knowledge engineers having strong practical motivations.

The material compiled here consists of most of the contributions of the participants and invited speakers, listed in alphabetical order of the authors. In character with the informal nature of the "work"shop, these papers reflect personal interests, work in progress, or summaries of research results rather than being fully elaborated articles. This workshop material, in the form of an internal report, is being mailed to all participants in order to stimulate exchange of comments and proposals for the discussion sessions *before* the workshop. The mailing list is included at the end of this volume.

We would like to thank the members of the program committee for their contribution to the organizing work, our affiliated organizations for their support, and finally all participants for their active engagement in the workshop.

January, 1993

Nicola Guarino and Roberto Poli

Table of Contents

Invited Papers

(only available papers have been included)

Toward principles for the design of ontologies used for knowledge sharing
Tom Gruber

Algebraic semantics for natural language: some philosophy, some applications.
Godehard Link

Ontology and the logistic analysis of reality
Barry Smith

→ *Representing attributes, roles, and nondetachable parts*
John Sowa

Workshop contributions

Towards a Part-whole Theory of Acts
Liliana Albertazzi, Massimo Libardi, Roberto Poli.

Ontology Construction and Natural Language
John Bateman

What's in an Individual? (Combining Terminological and Temporal Approaches into a Theory of Individuals)
Luca Boldrin, Matteo Cristani

An Ontology-driven Approach to Knowledge Representation
Flavio Bonfatti, Luca Pazzi

An Integrated Environment for Lexical Analyses
C. Caligaris, A. Cappelli, M. N. Catarsi, L. Moretti

The Semantics of Plural Reference: Plural nouns, mass terms and events in the perspective of Link's Algebraic Semantics
Claudia Casadio

• *An Ontology for Superficial Entities I: Holes*
Roberto Casati, Achille Varzi

• *A Taxonomy of Logically Defined Qualitative Spatial Relations*
Tony Cohn, D. Randell & Z. Cui

→ *Reification, Reflection and Ontological Promiscuity in Temporal Reasoning*

Guise Theory and Property Theory
Francesco Orilia

Reusing the Knowledge Base of LILOG?
Thomas Pirlein

→ *What Has Being Got To Do With KR?*
Joachim Quantz

Lexical acquisition from two different sources of lexical semantics information: machine readable dictionaries and textual corpora
Adriana Roventini

Conceptual Analysis and Construction of Ontologies: an Experiment on the Banking Domain
Patrick Saint-Dizier

Gibsonian 'Affordances' and Ontology
John Sanders

Towards an Integrated Theory of Geometric Knowledge in Object Concepts: Where Language and Vision Meet
Geoffrey Simmons

Your Thing Isn't the Same as My Thing: Toward Reaching Agreement on Shared Ontologies
Doug Skuce

→ *Towards a Causal Ontology Coping with the Temporal Constraints between Causes and Effects*
Paolo Terenziani

Computational Mereology: A Prolegomenon Illuminated by a Study of Part-of Relations for Multimedia Indexing
Wlodek Zadrozny and Michelle Kim

S. Costantini, G. Lanzarone, A. Provetti

A Linguistic Ontology.
Kathleen Dahlgren

The Knowledge Multiversum: a New Foundation for Knowledge Representation
Giorgio De Michelis, Carlo Ferigato

Mental Representation and Existence
Evelyn Doelling

Ontological Domains and Shifting of Semantic Sorts.
Johannes Doelling

• *Classical Mereology and Restricted Domains*
Carola Eschenbach and Wolfgang Heydrich

A Treatment of Plurals and Plural Quantifications based on a Theory of Collections
Enrico Franconi

Midwinters, End Games, and Bodyparts: a classification of part-whole relations
Peter Gerstl, Simone Pribbenow

Concepts and Relations
Nicola Guarino, Luca Boldrin

• *EL: A Representation That Lets You Say It All*
Chung Hee Hwang, Lenhart Schubert

• *Factoring the Knowledge Hierarchy*
Fritz Lehmann

An ontology of measurement units
Nicolaas Mars

Formal Foundations of Knowledge Sharing
Christopher Menzel

Sharing Ontologies is Sharing Semantics
Guy Mineau

Ontology of Partial Orders in Knowledge Representation
Amedeo Napoli

Formal Ontology in Language and Metalanguage.
M. Omyla
