Putting the Semantic In the Semantic Web

An overview of UIMA and its role in Accelerating the Semantic Revolution

Ontolog Forum, May 11, 2006

David A. Ferrucci
Senior Manager, Semantic Analysis and Integration
Chief Architect, UIMA
IBM T.J. Watson Research Center

Opening Observations

- **Semantics are key to Knowledge Discovery in Unstructured Sources**
 - Unstructured sources is where the action is
 - Keywords and Known-Item Search don't cut it
 - Need Richer Semantics
- **Massive manual semantic annotation is not likely**
 - A challenge for the Semantic Web vision
 - User View vs. Authors view
 - Automated Annotation is Essential
 - Many Component Annotators must emerge and combine
- **The right enabler and the right expectations**
 - Must enable rapid annotator development and integration
 - Applications can add value while tolerating less than perfect precision
 - Automation is necessary to tag and help humans reduce/focus content

Overview

- **Semantics Matters – A Motivating Example**
- **UIMA: Facilitating Automatic Semantic Discovery**
- **Using Semantics to Raise the Search *Bar***
 - *Finding the Sweet-Spot*
 - *Semantic Search and the SAW*
 - *Knowledge Extraction*

Semantic Match vs. Key Word Match

SEARCH: Going rate for leasing a billboard near Triborough Bridge

Top hits from popular search engines miss the mark...

Keywords may Match
BUT WRONG *Content returned*
*And right content **MISSED***

UIMA Overview

Unstructured Information Management Architecture

A open-source, pluggable framework for
accelerating the science and business of
semantic analysis

Analytics Bridge the Unstructured & Structured Worlds

UIMA Annotation Viewer

Report Date 14 April, 2003. From an interrogation of a cooperative detainee in **Guantanamo**. Detainee says he studied regularly with a man named William Davis at the Harvard Business School, **Cambridge**, MA in **1994**. From a captured laptop computer in Bermuda it is learned that **William Davis holds a Canadian passport in the name David Miller**. INS check reveals that a David Miller, from Canada, entered the USA on a travel visa in January of **2003** stating that he would be visiting a person named Clark Webster in **Richmond, Va**. The contact address given by **Miller was: 1631 Capitol Ave., Richmond VA**, **phone number: 804-759-6302**.

Semantic Analytics: The Promise and the Challenge

- Independently developed
- From an increasing # of sources

- Different technologies & interfaces
- Highly specialized & fine grained

Analysis Capabilities

- Language, Speaker Identifiers
- Tokenizers
- Part of Speech Detectors

Capability Specializations

- Modality
- Human Language
- Domain of Interest

The right analysis for the job will likely be a **best-of-breed combination** integrating across many dimensions.

- Relationship Detectors
- Classifiers ...

- Performance/Precision Tradeoffs...

Over 200 IBM researchers across 6 WW labs with UIM as a Strategic Focus

UIMA: Unstructured Information Management Architecture

The Architecture

- **Architecture for composing analytics that extract knowledge from unstructured sources & integrate results with structured information**
 - Interfaces, Data Representation Schemes, Design Patterns
- **Principal Architectural Commitments**
 - Common representation scheme
 - Common component engine interfaces (task and domain-independent)
 - Common component metadata
 - Pluggable Workflow and Transports
 - Embeddable (can be layered on top of system middleware)
- **Independent of but interoperable with application specific**
 - Data models
 - Algorithms
 - Language-level or domain-level concepts or tools
 - Workflows or workflow engines
 - Transports (e.g., SOAP, Vinci)
 - Back-end Systems (DB, Search Engine, KB Interfaces)

UIMA: The Software

- **Supports UIMA-compliant development, composition & deployment**
- **Java Framework Implementation**
 - Components in other languages (e.g., C++, PERL, PYTHON)
 - Support for co-located and service-oriented deployments
 - Just change XML Descriptor
 - Balances performance and flexibility
 - Support for C++ co-Located Aggregates for high-performance communication
 - High-Performances APIs to common data representation (CAS)
- **Where to Get It**
 - **Software Development Kit (SDK) Freely Available from IBM alphaWorks**
 - <http://www.ibm.com/research/uima>
 - <http://www.alphaworks.ibm.com/tech/uima>
 - Stand-alone Java Install
 - C++ Enablement Layer
 - Tutorial and Development-Level Utilities and Tooling
 - “Semantic Search” Engine and Indexer
 - Core Software Framework **Open-Source on Source Forge**
 - <http://uima-framework.sourceforge.net/>
 - Emerging Component Community at CMU
 - <http://uima.lti.cs.cmu.edu/index.html>

Partial *HUTT* Type System (254 concepts in total)

UIMA Annotation Viewer

Report Date 10 March 2003. Slick business dealings keep local olive oil importer out of the pits. Robert Crane was recognized by local business leaders for his skill at leading the Gorman Food Importers Inc. to strong profits while others are struggling. Mr. Crane, owner of Gorman Food Importers Inc., has consistently been able to produce exceptional results, while still keeping a focus on his employees. Gorman Food Importers Inc. has been in business since 1970 and specializes in food imports from the Middle East, including olive oil and figs. Gorman Food Importers Inc. is headquartered in NYC, and their warehouse is located in Paramus, NJ. The company employs 659 people in the two locations. Robert Crane can be reached at 608-703-2317.

The Basic UIMA Component Interfaces

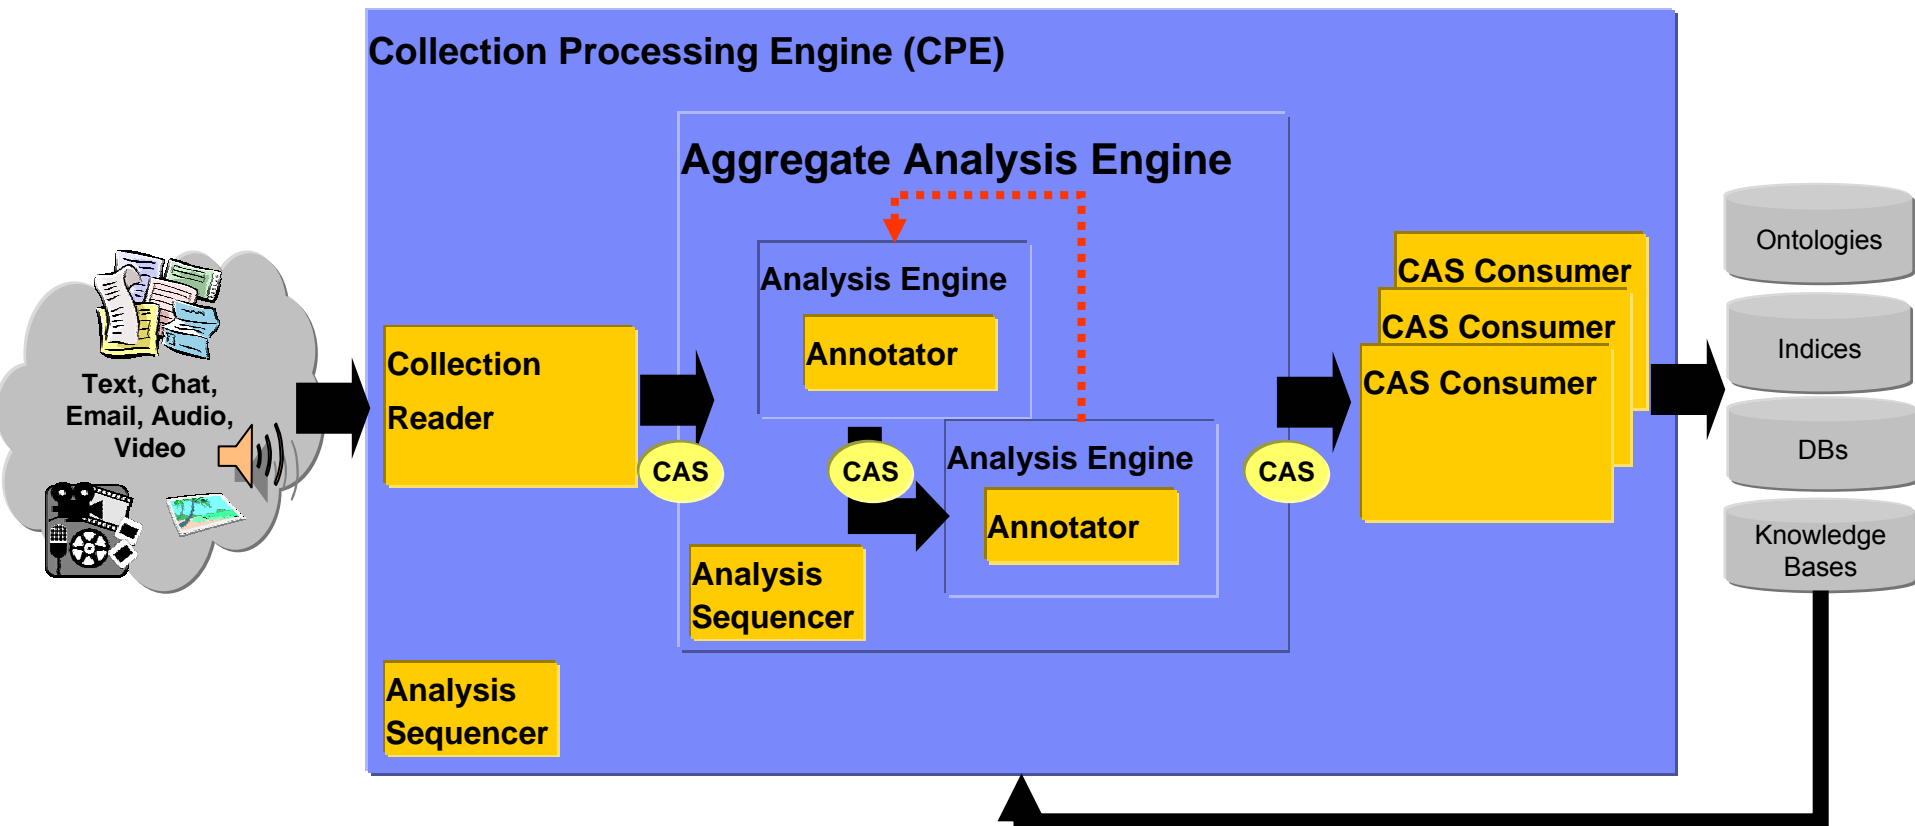

The UIMA framework allows the developer to compose & encapsulate a set of engines as a single **aggregate** component, insulating applications or users from its implementation details/complexities – Promoting Reuse.

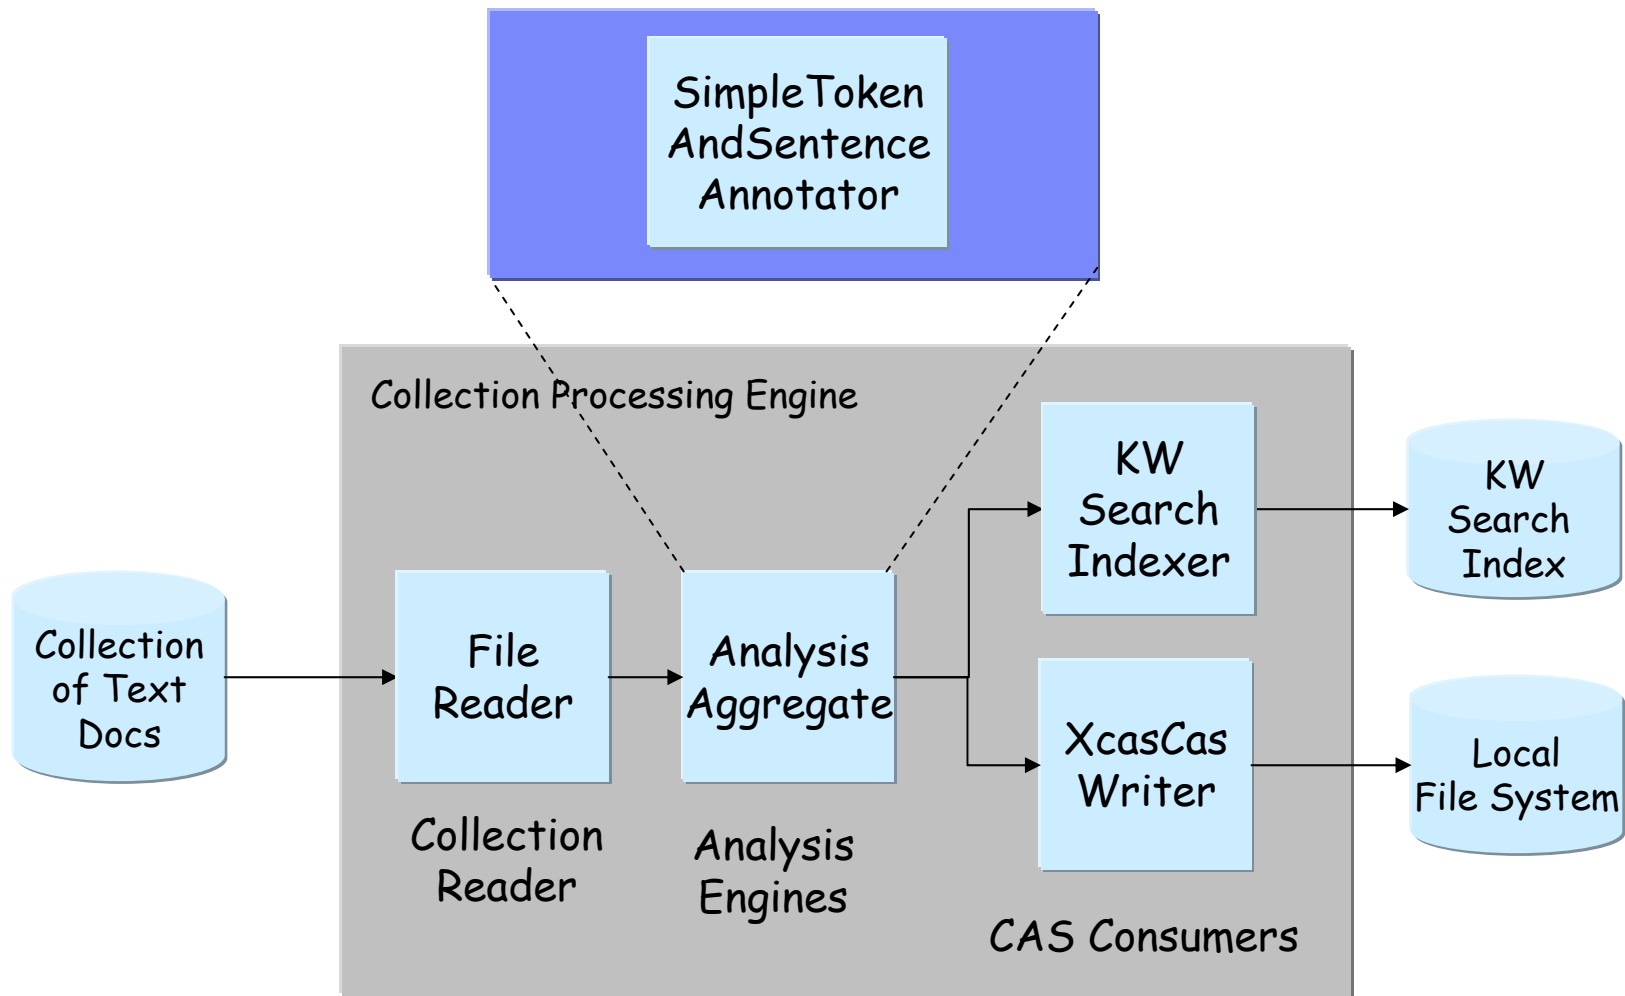

Collection Processing Engines: Aggregate Analytic Components From “Source to Sink”

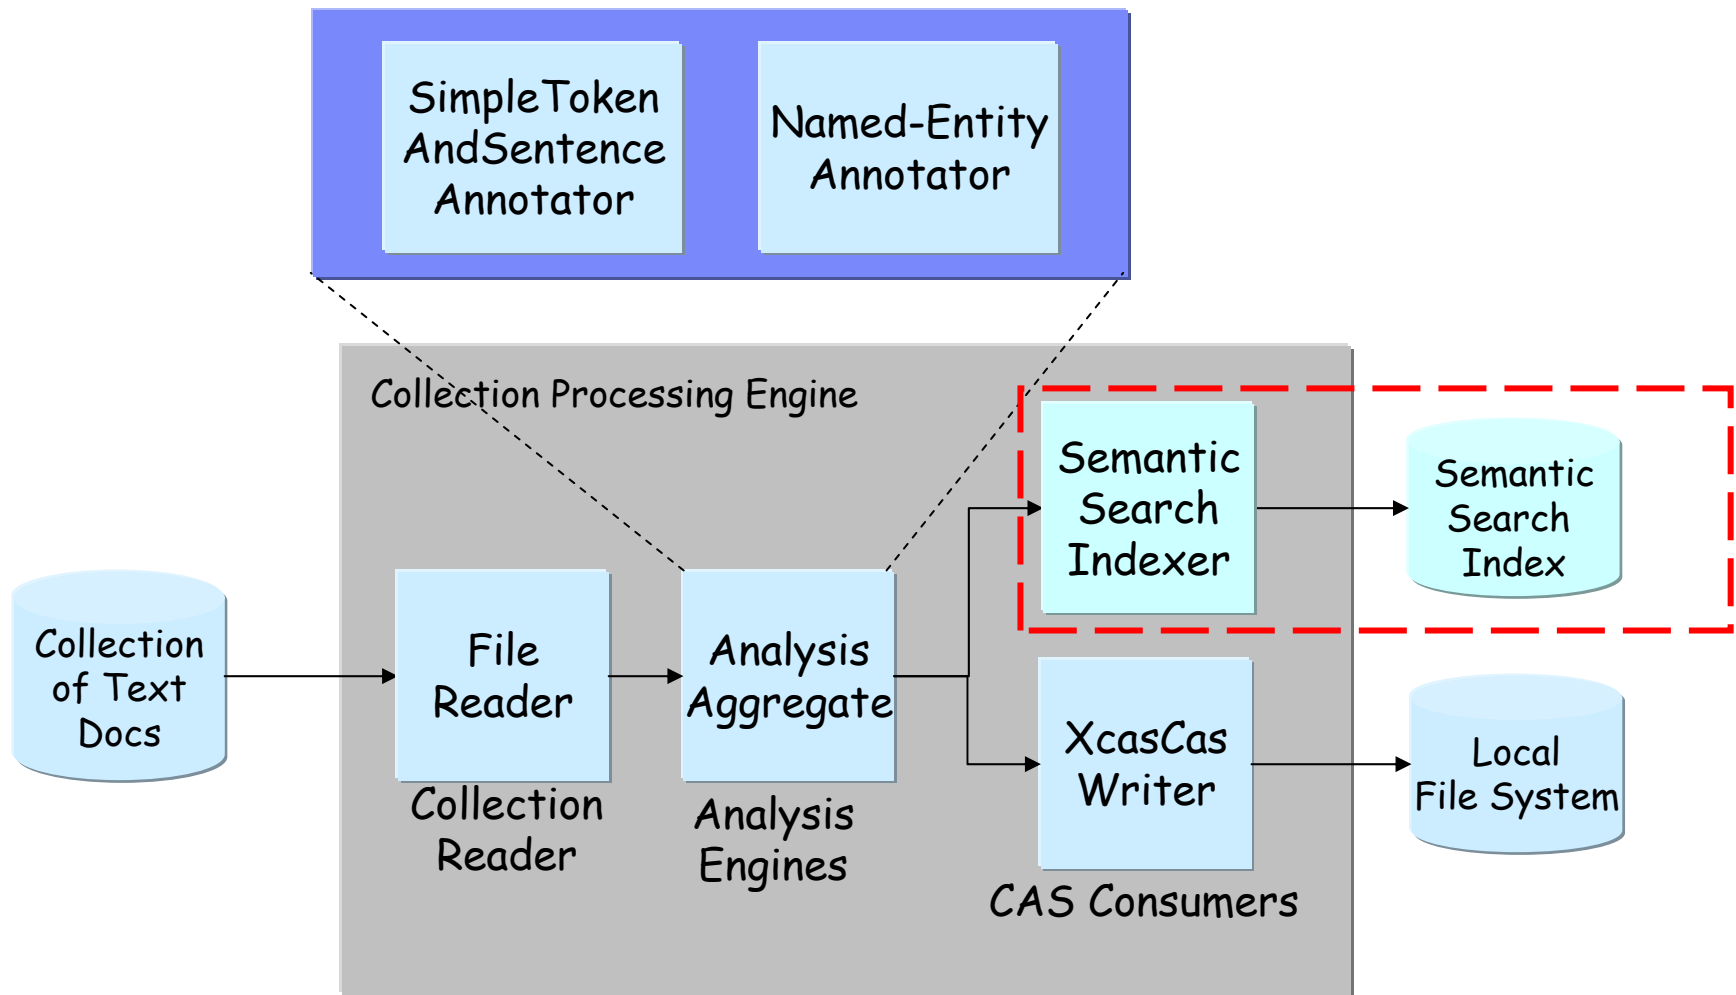

User Definable Workflow (3Q 2006)

CPE for Keyword Search

CPE for Semantic Search

We index and search over tokens AND the semantics annotations from UIMA

“first” is an ambiguous term so is “center”

We are looking for these terms with particular semantics possibly detected by the UIMA analytics

“first” as it appears
in the name of an
organization

The JuruXML Query Language Exploits the results of Analysis

Keyword Query:

“first”

Semantic Search Query:

<organization> first </organization>

Semantic Search Query:

<ceo_of> <person> Center </person> </ceo_of>

“Center” appearing in a name
of a person
who is the ceo of something

UIMA | IBM Research

Raising the Search *Bar*

From matching keywords to gathering knowledge

From Finding Documents to Gathering Knowledge

■ Known-Item Search

– Problem

- Find the items (e.g., documents) that individually contain some combination of keywords

– Operating Assumptions

- User assumed that exactly what he/she wants is there in a document
- There is one specific item out there that best solves information need
- Native artifact boundaries are rigid
- Contents = Used Words
- User provides contained key words or phrases

– Magic: Ranking

■ Knowledge Gathering and Synthesis

– Problem

- Produce an efficient collection of knowledge that is relevant to information need

– Operating Assumptions

- Multiple items at varying grains together will solve information need
- Artifact boundaries are permeable
- Contents ~ Knowledge
- User provides a conceptual space of interest (possibly using words or phrases)

– Magic: Semantic Matching

Raising the Search Bar

- **Exploit Semantic Analysis**
 - Tolerate less-than-perfect analytics
 - Use to Eliminate Noise and Focus Content
 - Degrade gracefully toward key-word search
- **The more in the query the better the results should be**
 - Web-Search conditions users to ~ 2 key words
 - Recall drops off dramatically
 - The more users type the less they know about the desired artifact & we punish them for it
 - Encourage the user to fully describe their information need in their terms
- **Predictive Query Interpretation and Refinement**
 - Should be clear on how to modify a query to direct results
 - Throttle Precision and Recall
- **Cross Artifact Boundaries**
 - The best solution is not always the single-based document
- **Identify the best Grain (relates to Density)**
 - Document, Passage, Entity, Fact, Set of...

UIMA | IBM Research

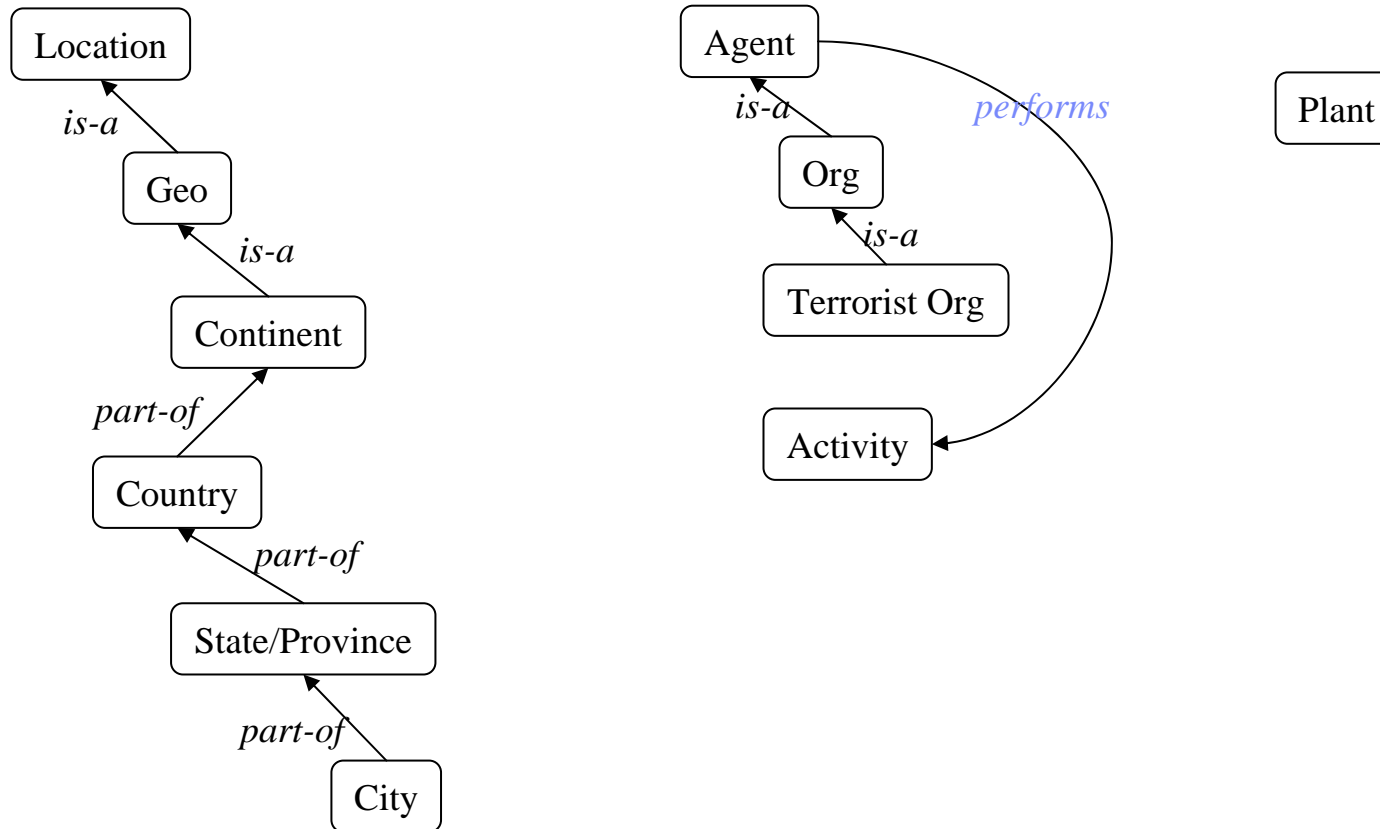

Finding the Sweet-Spot

Using an Ontology and an interactive dialog to elicit priorities and select or focus the content

The QA-Cube

- **Produces conceptual dimensions present in a scenario**
 - Each represented by a concept taxonomy
- **Interacts with user to elicit relative priorities**
 - Where the user needs to be most specific and
 - Where he is willing to relax the requirements
- **Evaluate or Generate Focused Corpora**
 - Less Noise, More Relevant
 - Worthy of Deeper Analysis/Exploration

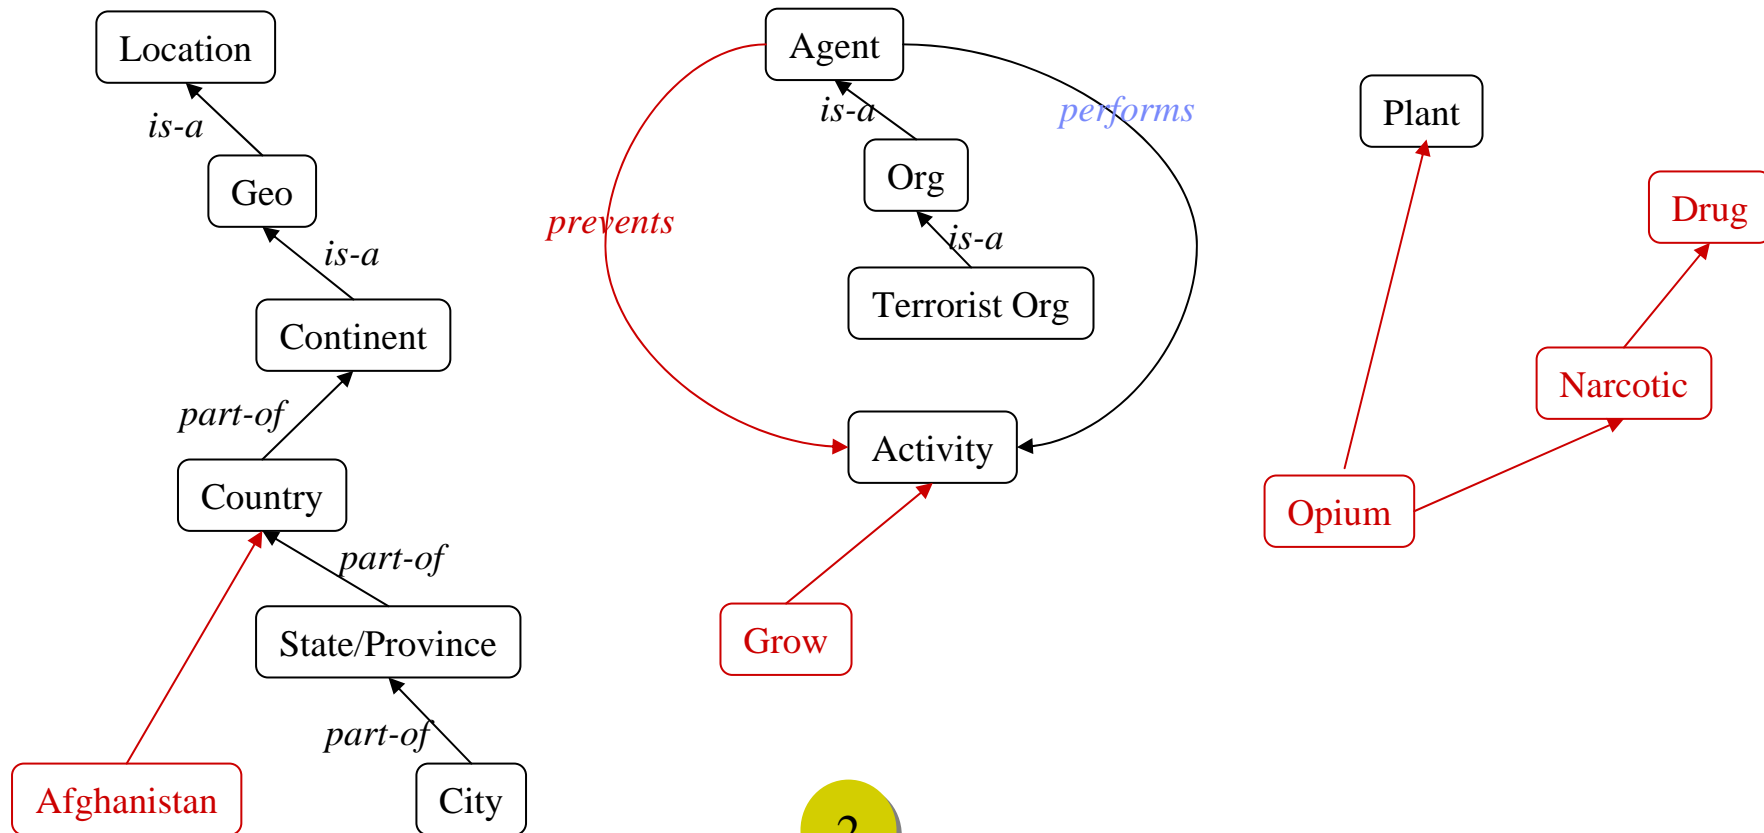

Example Base Ontology

NLP on scenario text
(e.g., Topic, NE Detection)

Scenario Ontology Expansion

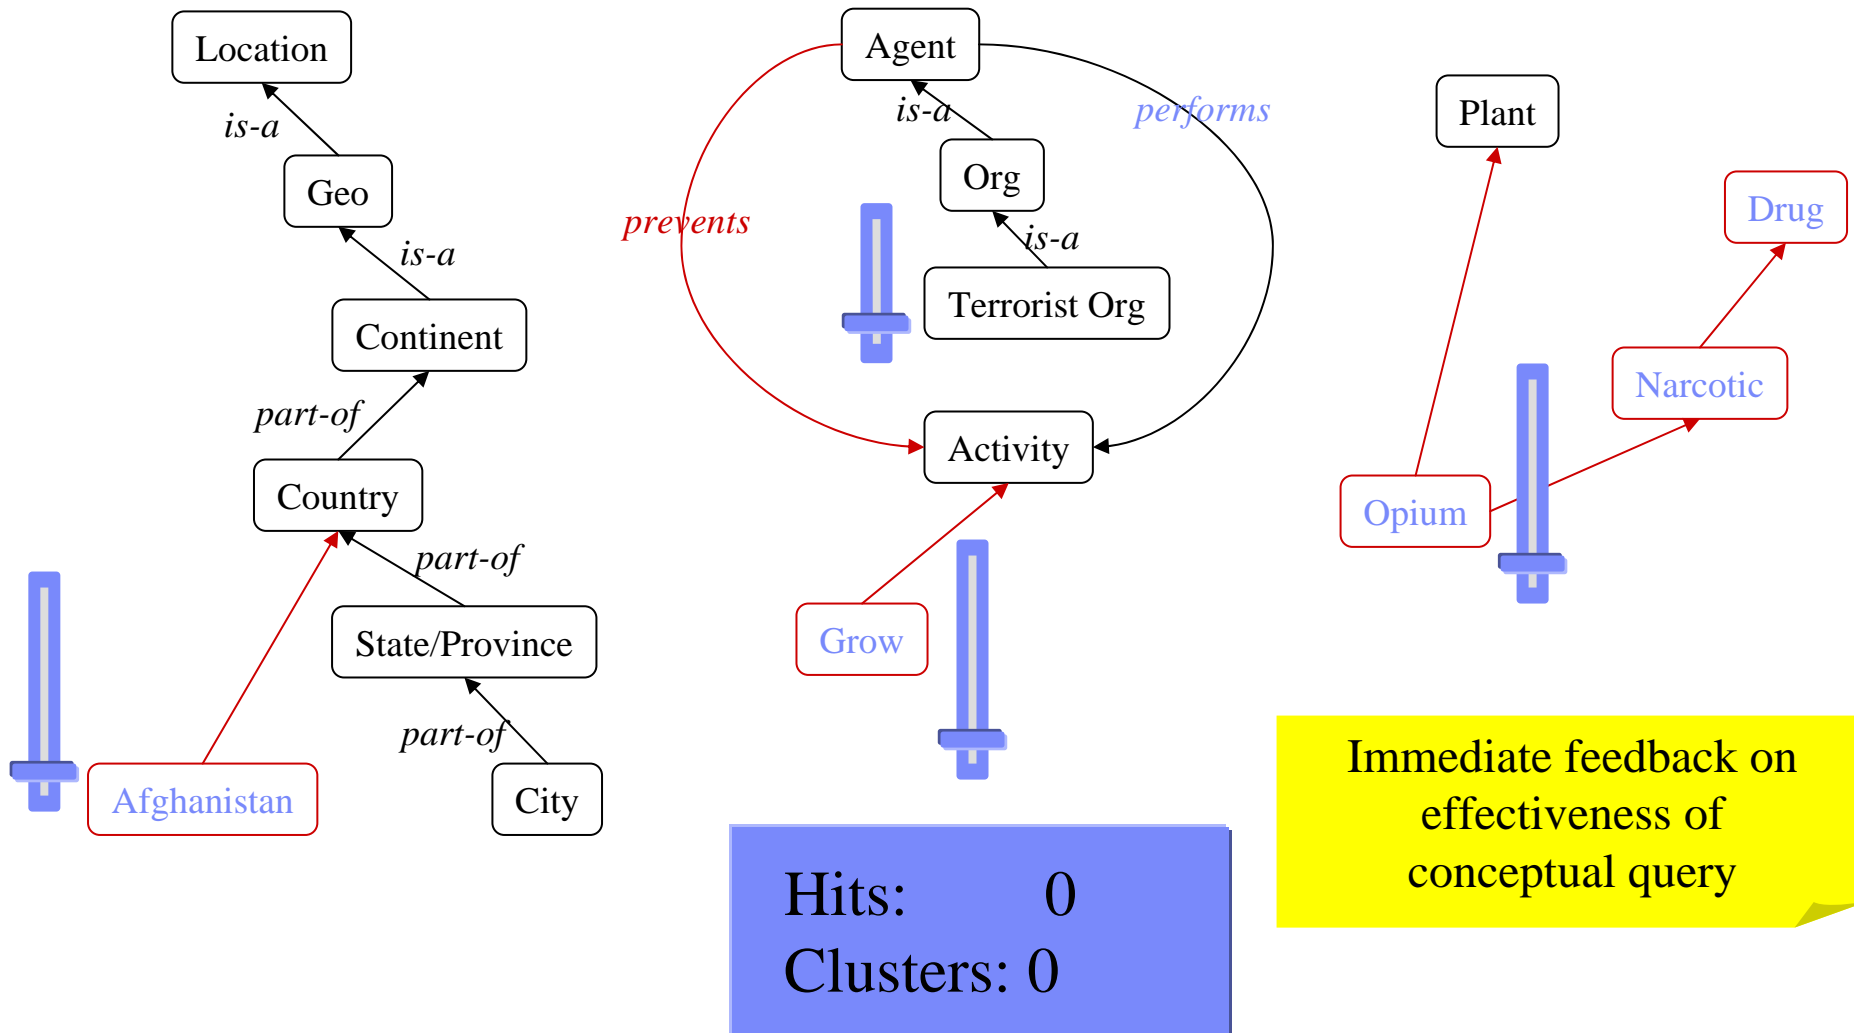

“...explore the prevention of opium growing in Afghanistan...”

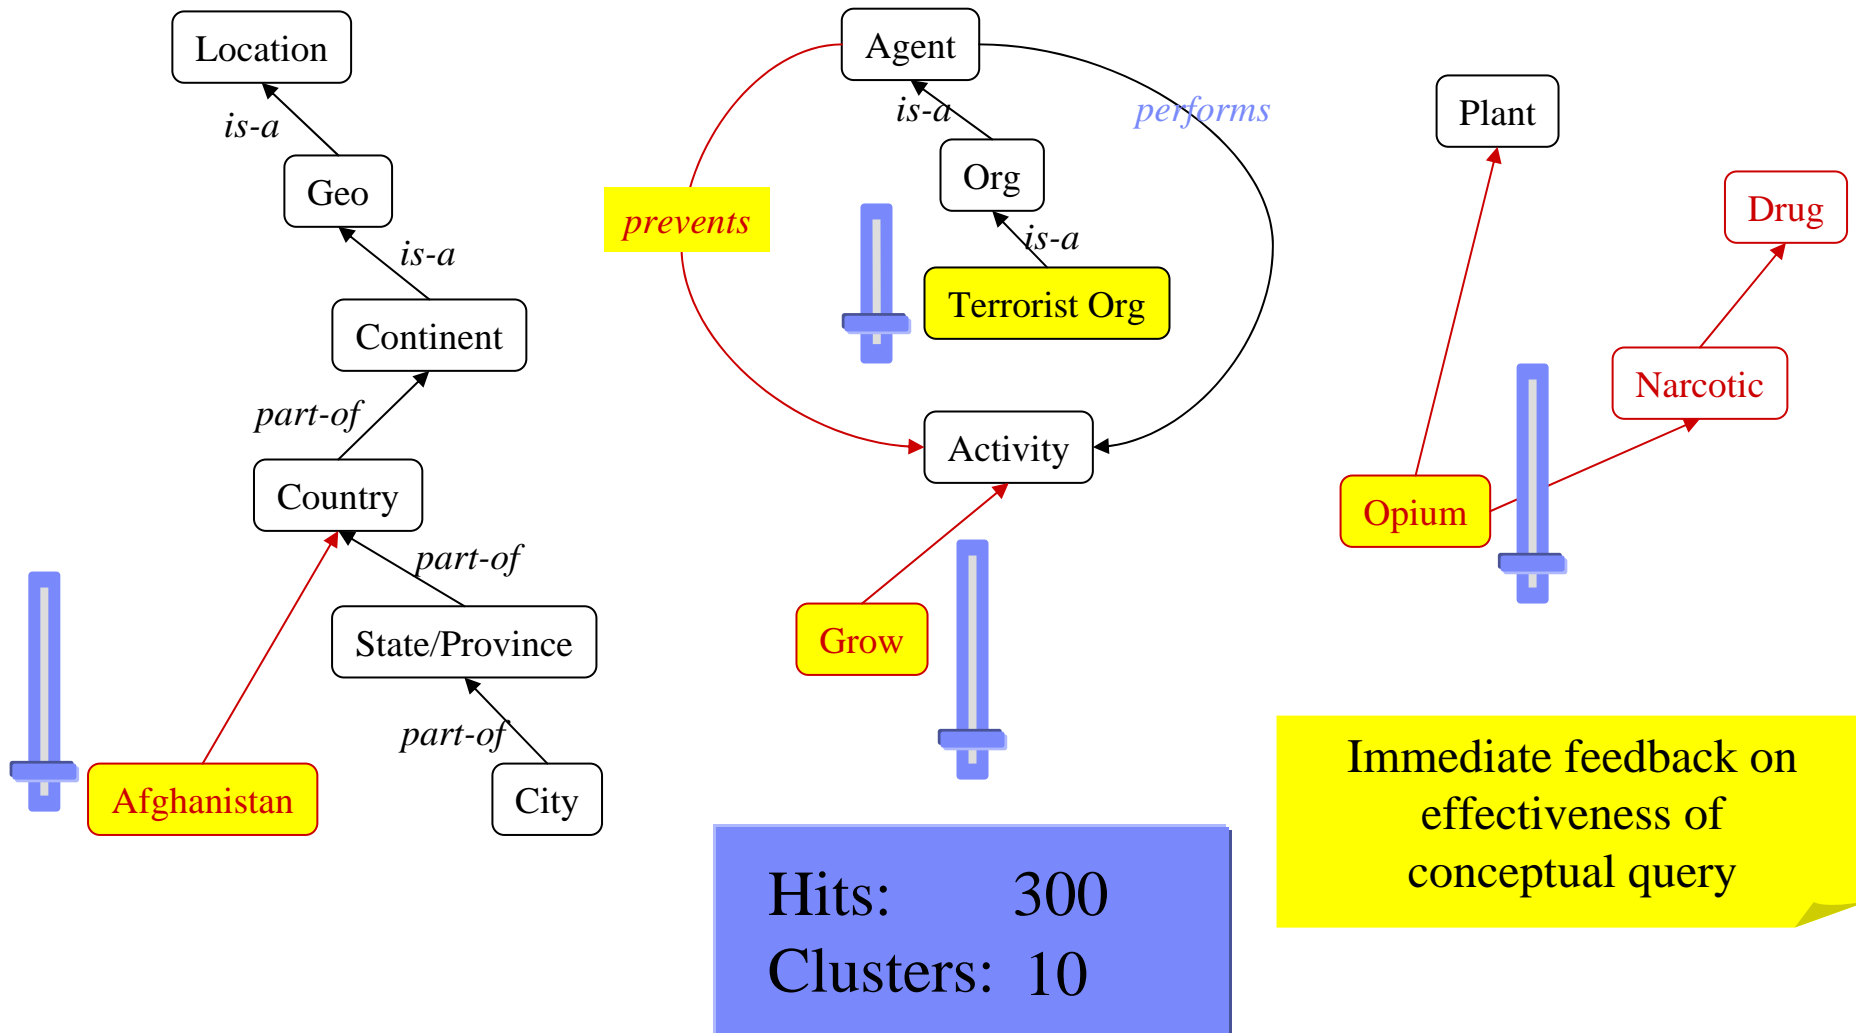

2

- Identify and query ontologies & KBs
- Find relevant concepts/relations
- Integrate with Scenario Ontology accordingly

Selects key dimensions in QA Cube

Find the Sweet Spot

UIMA | IBM Research

Semantic Search and Analysis Workbench

Exploiting Task Ontologies & Automatically
Discovered Semantics to Improve Search
Quality

Semantic Search

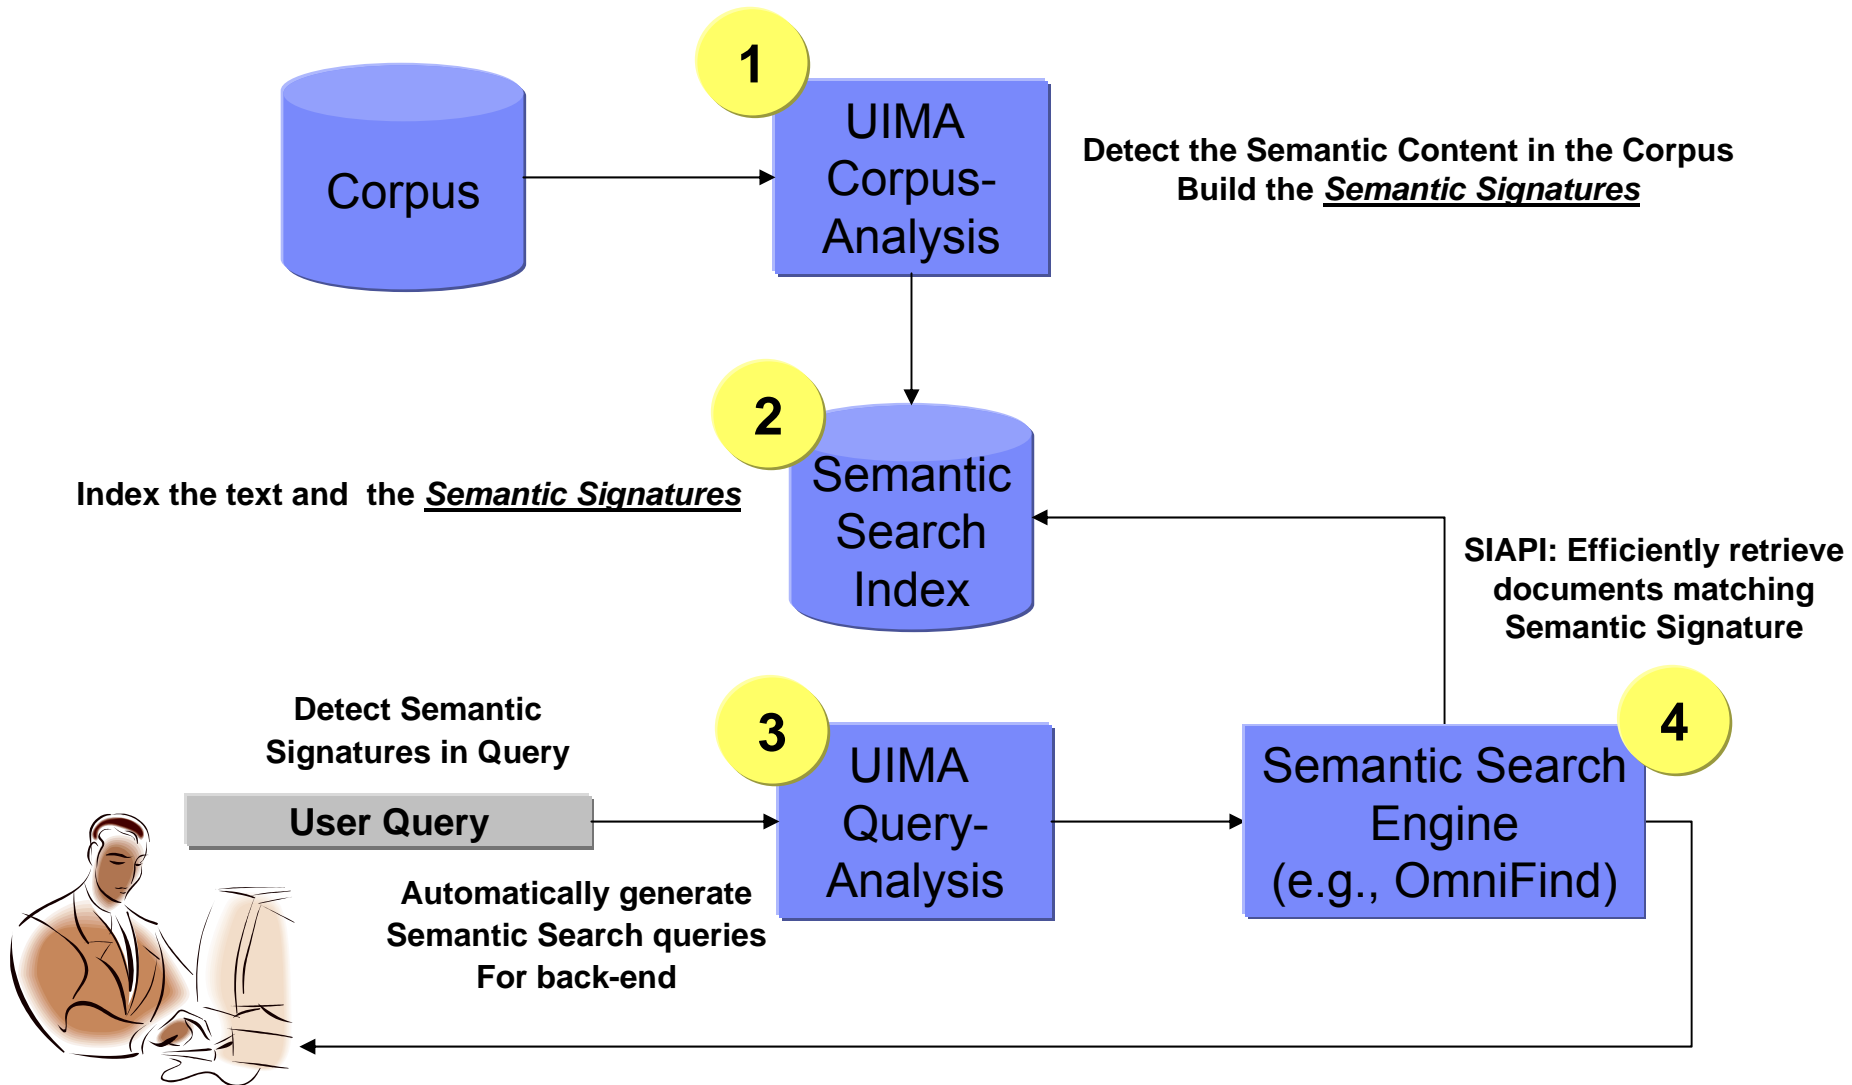

Broadly Defined...

An extension of search that exploits *semantic analysis* to improve *precision*, *recall*, and *density*.

The SAW: A Tool for Knowledge Gathering and Synthesis

- **Beyond Keyword Search**
- **Ontologies**
- **Automatically Discovered Semantics**
- **Throttle Precision and Recall**
- **Toward Knowledge Gathering and Synthesis**

The Semantic Search 4-Step Program

- Task Ontology
- Used as basis for interpreting query
- And for viewing/selecting relevant knowledge

- User Types whatever
- Keywords, Phrases, Questions

- Query Analysis
- Generates Semantic Search Query
- Based on UIMA analytics

500+ documents | 500+ passages

- Intelligent Passage Selection
- Based on semantic processing
- Hones in on relevant sections
- Redefining the right grain

[SADDAM CLOSE TO NUCLEAR WEAPON](#)

The defector claimed that Iraq produced its 40kg of weapons-grade uranium using the electromagnetic isotope separation process.

[HYPING THE IRAQI BOMB](#)

On 22 November 1990, US President, George Bush, claimed that Iraq was close to producing nuclear weapons.

US BELIEVES IRAQ HAS BUILT
MAGNETIC ISOTOPE ENRICHMENT PLANT.

Abstract: In June 1990, US experts briefed an Iraqi nuclear official who defected from Iraq. The US experts now believe that Iraq has at least one secret calutron uranium enrichment facility. US satellite photos taken several months ago may reveal calutron equipment. Since 1988, Iraq has been importing gas centrifuge uranium enrichment equipment from several western countries. In 1990, the US Department of Commerce blocked the sale to Iraq of vacuum diffusion pumps from CVC, a US company in NY, after US Customs determined that the pumps could be used in Iraq's centrifuge program. US officials now believe the pumps were intended for Iraq's calutron program. In the late 1980's, another US firm exported to Iraq \$1.2 million worth of 5-ampere, 40 to 45 kilovolt electrical generators, claimed to be for induction welding. US officials now believe that Iraq imported the generators for use as calutron power supplies. The generating equipment does not fall under dual-use technology US export control laws. Export and import of centrifuge-related dual use technology is strictly controlled by US export laws, while calutron-related equipment is not controlled. In 1949, the US declassified calutron equipment. Calutron equipment is not on the Zangger "trigger list," or the Nuclear Suppliers Group commodity control list. The Iraqi defector claims that Iraq produced 40kg of weapons-grade uranium from its calutrons, but US officials believe that Iraq only produced 1 to 5kg. In late 1990, press reports in the US claimed that Saddam Hussein had constructed centrifuge plants, uranium hexafluoride conversion facilities, a uranium mine, and an underground plutonium production reactor, all located in northern Iraq. US officials have not confirmed these press reports. A calutron plant may be located near a hydroelectric power station in

Query Analysis: *Exploiting Relation Detection*

Want User to Type these....

- Who owns Select Gourmet Foods?

- Select Gourmet Foods owner?

The System to Generate These....

Greater Precision

- `<Owner>`
 - `+<> <Person> </Person> <Organization> </Organization><>`
 - `+<Organization> Select Gourmet Foods </Organization>`
- `</Owner>`

- `owner`
- `<Organization> +Select +Gourmet +Foods </Organization>`
- `+<>`
 - `<Organization> </Organization>`
 - `<Person> </Person>`
- `</>`

Still targeted but Greater Recall

UIMA Data Representation Alignment with Standards

■ CAS (Instances)

- Semantics: Object Graph
 - A *stand-off* representation leaves original artifact untouched
 - Expressivity allows multiple interpretations of artifacts, overlapping annotations
- XML Syntax: XMI (inherit open-source tooling: <http://www.eclipse.org/emf/>)
- Inline XML may be generated
- OWL RDF may be generated

■ CAS Type System (Schema)

- Semantics: Ecore/EMOF
- XML Syntax: XMI
- XML Schema for partial instance validation can be generated
- Java Classes for CAS Types can be generated

■ Component Metadata

- For Discovery, Reuse and Application-Level Plug-in-Play
- XML document declaratively capture identification, configuration, behavior and deployment information about UIMA components.
- Tools to create standard **OSGi** Bundles for painless application integration from servers to cell phones <http://www.aqute.biz/osgi.html>

Leverage open-source Eclipse/EMF Tooling
