

Ontology Summit 2013

Fabian Neuhaus

**national
center for
ontological
research**

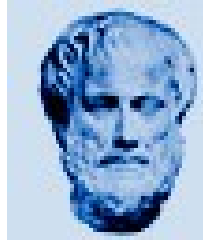

Goals

- advance ontology as science
- foster development of high quality ontologies
- develop measures of quality for ontologies to establish best practices

Expectations

- Stance against relativism
- Three questions
 - What are the metrics for quality?
 - How do they relate to requirements for ontology development?
 - How do we measure quality and whether requirements are met?
- Existing practices and tools
