

# Follow-up & Action Plans: Ontology of Ontology Evaluation

Amanda Vizedom

23 May 2013

# Status

- Status (as reported at Symposium):
  - Complete 1st set of models:
    - Consolidated informal model (Cmap): in progress
    - Consolidated informal model (English) in progress
    - OWL formal model: first pass done, based on end-of-hackathon graph; will revisit after informal models done.
    - CLIF formal model: held for informal model completion
  - Evaluate & revise:
    - Evaluate each version with corresponding tools.
    - Compare models to each other.
    - Invite general review.
  - Release into repository/ collaboration space.

# Further actions

- Birds of a Feather session after Symposium:
  - Limited by general mental fatigue
  - Suggestions and discussion included:
    - alternate tools for graphical informal modeling
    - W3c & other provenance activity
    - Qood Grid
    - Volunteering MichaelGruninger in absentia for work related to OMV
    - Use Case Description Ontology (UCDO)
    - Central home page to coordinate forward activity
  - Renewed & expanded expressions of interest, including
    - Interest in contributing to further work
      - AmandaVizedom
      - AliHashemi
      - MikeDean
      - MikeBennett
      - dougFoxvog
      - GaryBerg-Cross
      - KenBaclawski
      - PeterYim
    - Interest in availability of results for use (several)
      - Request to post future developments to Ontology Summit list
      - Requests to post future developments to Google+, twitter
    - General desire to be kept apprised

# Observations

- Even cut-back scope was a bit too much for 1 day
  - Multiple 1-day sessions with time between for asynchronous work would be good
- Holiday collision
- Many surprise participants
- With hindsight, can see where different/better planning & preparation would have helped, even regarding tools used for collaboration
- With better tools, activity could be supported entirely asynchronously
  - More planning and logistical prep required, but
  - More contributors supported, and
  - More self-documenting
