**Java Standards' role
in the Internet of Things**

ORACLE[®]

Standards & Internet of Things: Oracle Perspective

Harry J Foxwell, PhD

Principal Consultant, Oracle Public Sector

harry.foxwell@oracle.com

BY THE YEAR 2020, THERE WILL BE

50,000,000,000 connected devices,
creating and sharing

40,000,000,000,000 GB

worth of data across the Internet of Things.

Standards Development

- Evolutionary...don't always know where it's leading
- Time-consuming...takes years, many false starts
- Collaborative/competitive...vendor & user goals
- Want widely accepted, used, & supported (enforced?)
- Requires
 - Accepted Ontology, Reference Implementation, Use cases, Active Promotion
- Use Case in point: Java => Jini => IoT
 - “Internet of Things” – Kevin Ashton, 1999
 - Java (1995), Jini (1998)
- “Been there, done that...” (Sun Microsystems => Oracle)
 - ...but not the end, of course!

Java, Jini, IoT Ontology & Reference Architecture Development

- Required

- Device & service definitions, relations, capabilities
 - Taxonomy = classification; “is a”; hierarchy/tree
 - Ontology = relations; web of connections
- Device & service discovery & self-registration
 - capability advertisement
 - context awareness: time/space, data format
 - net accessible object stores (e.g. JavaSpaces)
- Language definition
 - APIs, syntax, development tools
 - Concurrent efforts, e.g. Sensor Modeling Language

- Desirable

- Leverage existing developer experience, implementations, communities, educational resources, vendor support

For Example

- Java Community Process
 - 25 Executive Committee Members:
 - ARM, Eclipse Foundation, Fujitsu, HP, IBM, Intel, Oracle, Red Hat, ...
 - Large, active contributing membership
 - <http://www.oracle.com/us/corporate/citizenship/java-community-process-2406987.pdf>
- Results
 - Java 8 ME Embedded
 - (128 KB RAM, 1 MB Flash/ROM), for IoT, M2M
 - Java 8 SE Embedded
 - SDKs & Emulators, Reference Implementations, ...

Collaborative Evolution

15 Years of Java Community Process

Celebrating its 15th year, the Java Community Process (JCP) continues its evolution by harnessing the power of the global Java community.

AN ACTIVE COMMUNITY

800+
GLOBAL MEMBERS
INCLUDE CORPORATIONS,
NON-PROFITS AND
INDIVIDUAL JAVA USERS.

80x
80 MEMBERS ACTED AS SPEC
LEADS ON JSR PROJECTS.

360+ JSR PROJECTS DEVELOPED, INCLUDING
JAVA SE, JAVA EE, JAVA ME PLATFORMS.
=10

2,500
12,000+
COMMUNITY PARTICIPANTS
REGISTERED ON JCP.

2,500 EXPERTS SERVED
ON EXPERT GROUPS
FROM 500 MEMBERS.

500

GLOBALLY, 45 JUGS
ARE JCP MEMBERS.

45x

ADOPT-A-JSR
PROGRAM:
JAVA USER
GROUPS (JUGS)
INCREASE
GLOBAL
PARTICIPATION.

- 1999**
JCP 1.0
Sun is decision maker. Members contribute to Java technology specifications.
- 2000**
JCP 2.0
Two Executive Committees (EC) introduced.
- 2002**
JCP 2.5
More participants engaged with open source and individual members.
- 2004**
JCP 2.9
Processes streamlined, increased agility.
- 2009**
JCP 3.7
Greater openness, increased transparency.
- 2011**
JCP 3.9
Transparency, Participation, Agility.
- 2012**
JCP 3.8
Two ECs merged, 25 EC members represent the Java community.
- 2014**
JCP 3.10
Membership levels expanded for even more JCP participation.
- 2015**
The future JCP—JCP 3.0+—JCP evolves to support the Java developer community.

Go to jcp.org to participate in the future of Java.

Some Useful Reading...

- *Java and IoT: The Intelligent Platform for the Connected Vehicle*, Oracle White Paper, Jan 2015;
