

# **OMV / CTS2 Crosswalk**

# Outline

- **Common Terminology Services 2 (CTS2) - a brief introduction**
- **CTS2 and OMV – a crosswalk**

**OMV / CTS2  
Crosswalk**

# **CTS2 – A BRIEF INTRODUCTION**

# Common Terminology Services 2

## CTS<sub>2</sub>

A standard for a shared semantic model and API for the query, interchange and update of terminological content.

Terminological content: code sets, value sets, lexicons, thesauri, classification systems, ontologies, ...

# CTS2 Why?

**Terminological Resources (Ontologies, classification systems, code sets, value sets...) are the “semantic backbone” of information exchange**

**Examples: ICD-9, ICD-10, MEDRA, Gene Ontology, SNOMED-CT, LOINC, UNSPSC, FMA, Agrovoc, Dublin Core, SKOS, RDF, OWL, ISO Language Codes, ISO Country Codes, ...**

# CTS2 Why?

**... thousands of institution / application specific enumerations, code sets and value sets.**

- **Resources published in different formats...**
- **.... using different grammars .....**
- **... with different update and release cycles...**

# CTS2 Why?

**Interoperability requires that information source and sink have the same set of shared “meaning”...**

**... especially as many of these resources become “logic based” (aka. Declarative Programming)**

# DL Foundations

## Syntax

Input  
 TOP  
 BOTTOM  
 NUMBER  
 INTEGER  
 STRING

(and  $C_1 \dots C_n$ )  
 (or  $C_1 \dots C_n$ )  
 (not  $C$ )  
 (all  $R C$ )  
 (some  $R$ )

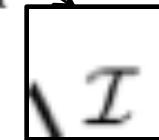

## Mathematics

Syntax      Abstract  
 $\top$   
 $\perp$

$C_1 \sqcap \dots \sqcap C_n$   
 $C_1 \sqcup \dots \sqcup C_n$   
 $\neg C$   
 $\forall R : C$   
 $\exists R$

## Interpretation

Extension  
 $\Delta^{\mathcal{I}}$   
 $\emptyset$   
 the numbers  
 the integers  
 the strings  
 $C_1^{\mathcal{I}} \cap \dots \cap C_n^{\mathcal{I}}$   
 $C_1^{\mathcal{I}} \cup \dots \cup C_n^{\mathcal{I}}$   
 $\Delta^{\mathcal{I}} \setminus C^{\mathcal{I}}$   
 $\{d \in \Delta_a^{\mathcal{I}} \mid R^{\mathcal{I}}(d) \subseteq C^{\mathcal{I}}\}$   
 $\{d \in \Delta^{\mathcal{I}} \mid R^{\mathcal{I}}(d) \neq \emptyset\}$

# Why It Matters

**Labels, Definitions, Examples, Usage Notes, etc. are the entry point and the exit point from formal ontologies...**

**... but are only of value if we know where to find them.**

# Finding Definitions Today

## RDF:

```
<rdf:Property rdf:about="http://www.w3.org/1999/02/22-rdf-syntax-ns#predicate">
  <rdfs:isDefinedBy rdf:resource="http://www.w3.org/1999/02/22-rdf-syntax-ns#" />
  <rdfs:label>predicate</rdfs:label>
  <rdfs:comment>The predicate of the subject RDF statement.</rdfs:comment>
  <rdfs:domain rdf:resource="http://www.w3.org/1999/02/22-rdf-syntax-ns#Statement" />
  <rdfs:range rdf:resource="http://www.w3.org/2000/01/rdf-schema#Resource" />
</rdf:Property>
```

## BFO:

```
<owl:Class rdf:about="#FiatObjectPart">
  <rdfs:subClassOf rdf:resource="#MaterialEntity" />
  <owl:disjointWith rdf:resource="#Object" />
  <owl:disjointWith rdf:resource="#ObjectAggregate" />
  <rdfs:label rdf:datatype="xsd:string">fiat object part</rdfs:label>
  <rdfs:comment rdf:datatype="xsd:string">Definition: A material entity [s<br/>
    <rdfs:comment rdf:datatype="xsd:string">Examples: upper and lower lobes<br/>
    <rdfs:comment rdf:datatype="xsd:string">Synonyms: fiat substance part</rdfs:comment>
</owl:Class>
```

# Finding Definitions Today

## OCRe:

```
<owl:ObjectProperty rdf:about="&ontologies;OCRe.owl#OCRE900040">
  <rdf:type rdf:resource="&owl;FunctionalProperty"/>
  <rdfs:label rdf:datatype="&xsd:string">has anchor time</rdfs:label>
  <statistics:definition rdf:datatype="&xsd:string">The reference time point
  <rdfs:domain rdf:resource="&ontologies;OCRe.owl#OCRE400012"/>
  <rdfs:range rdf:resource="&ontologies;OCRe.owl#OCRE400024"/>
</owl:ObjectProperty>
```

## NCIt: Note multiple definitions and provenance

```
<property>
<name>DEFINITION</name>
<value><![CDATA[<def-source>NCI-GLOSS</def-source><def-definition>Treatment using more than one drug</def-definition></def-source></def-definition></value>
<property>
<name>DEFINITION</name>
<value><![CDATA[<def-source>MSH2002_06_01</def-source><def-definition>Drug therapy with two or more drugs</def-definition></def-source></def-definition></value>
<property>
<name>DEFINITION</name>
<value><![CDATA[<def-source>CSP2002</def-source><def-definition>combination of drugs in therapeutic doses</def-definition></def-source></def-definition></value>
```

# Finding Definitions Today

The list continues – especially when you include non-OWL ontologies (SNOMED-CT for example), and classification systems, thesauri, code/value pairs, etc.

# CTS2 Goals

- Specify a common model of what is common amongst these resources
- Include metadata about what the resources are for, who publishes them, how often they are released
- Create mechanisms for federation, distribution, incremental update and history

# CTS2 Goals (continued)

- Provide a bridge between the emerging Semantic Web community (RDF, SKOS, OWL, SPARQL) and structured models of information

**OMV / CTS2  
Crosswalk**

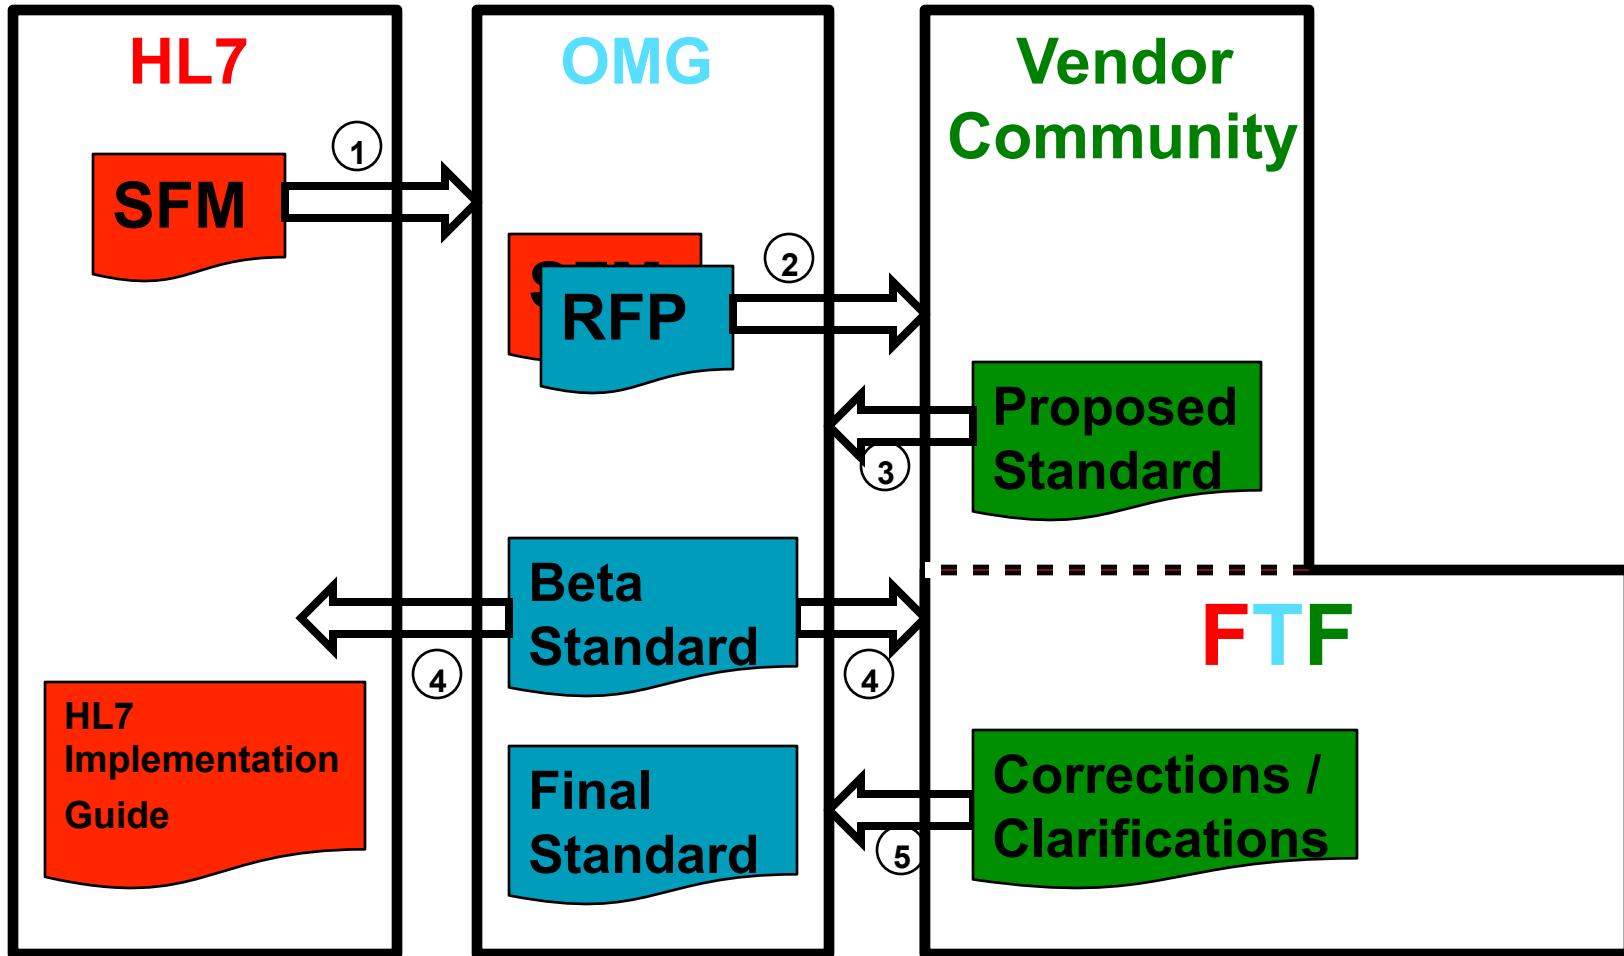

# **CTS2 PROCESS**

# CTS<sub>2</sub>

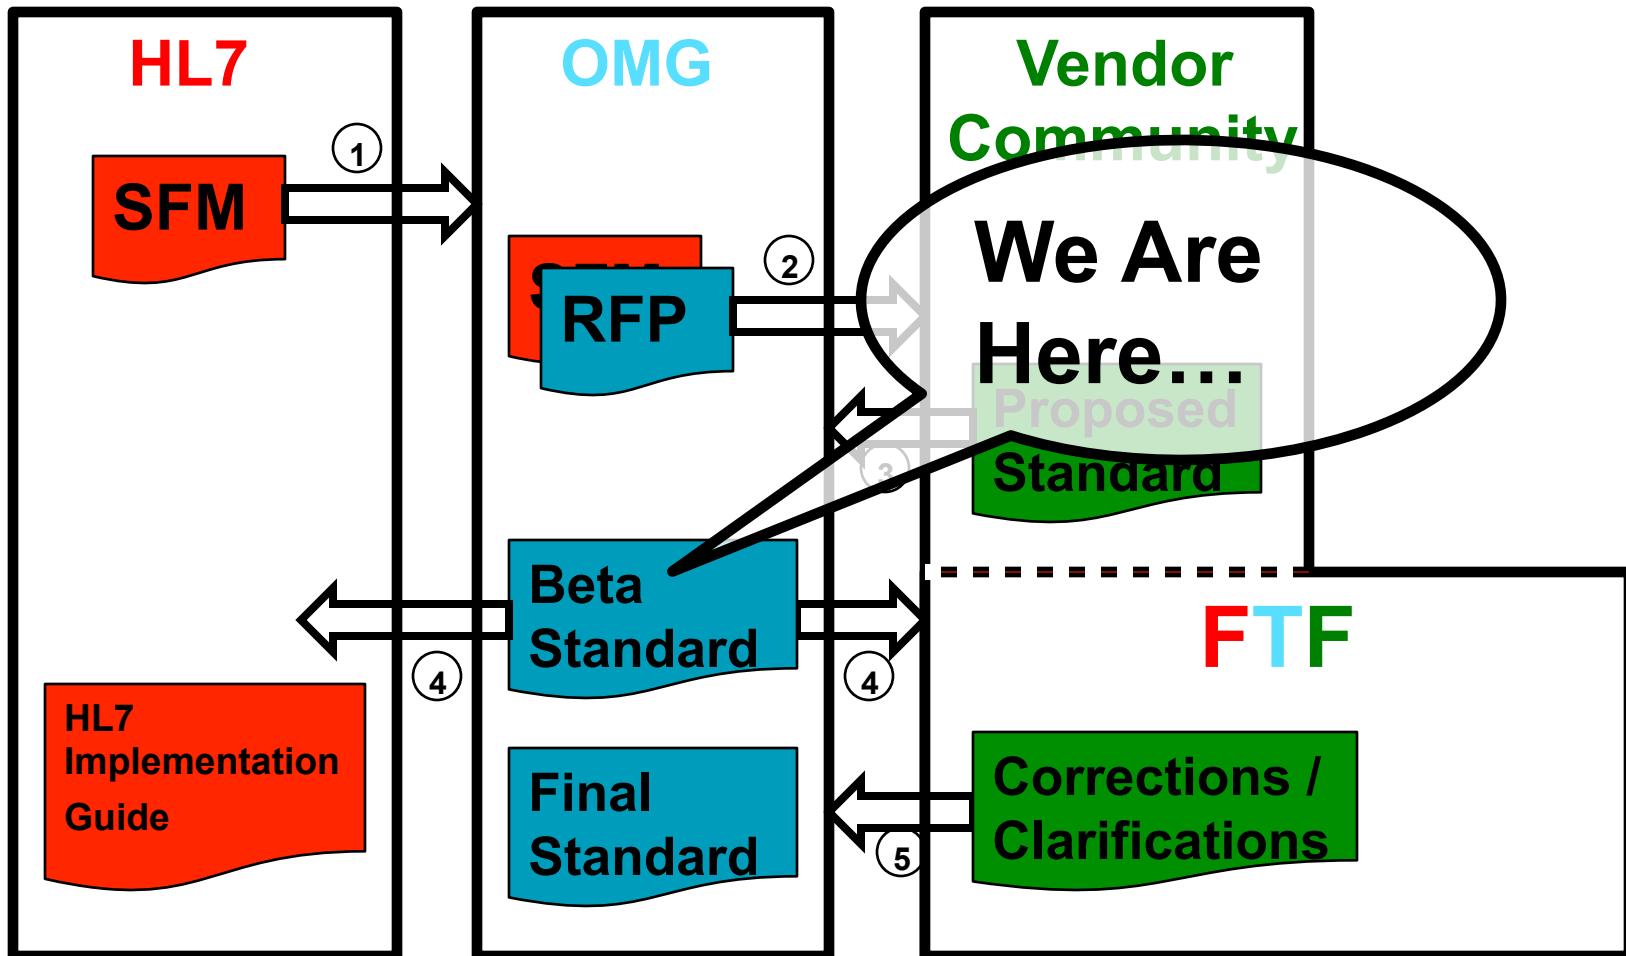

**Developed through the Healthcare Services Specification Project (HSSP) - a collaboration between Health Level 7 (HL7) and the Object Management Group**

- HL7 provides the requirements as a Service Functional Model
- OMG develops the formal specification
- HL7 adopts and validates via an HL7 Implementation Guide

# Healthcare Services Specification Project (HSSP) Workflow

# Healthcare Services Specification Project (HSSP) Workflow

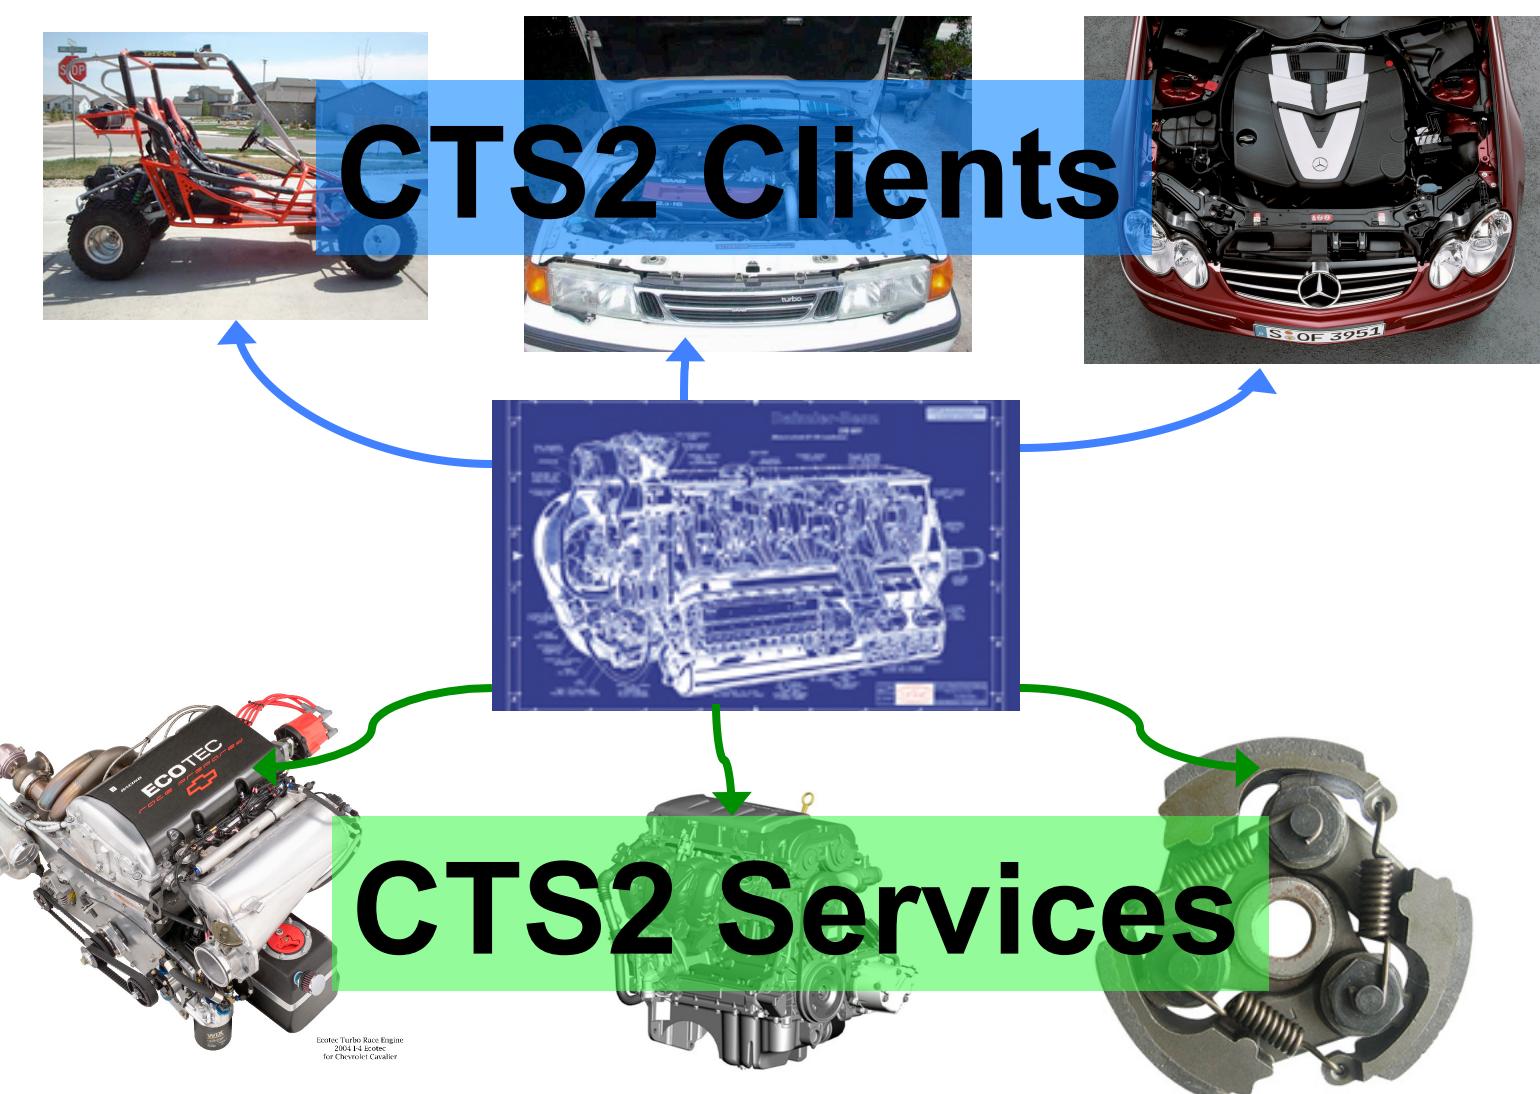

# CTS2 Beta Standard

**CTS2 is an *Application Programming Interface (API)* specification.**

- It defines the semantics, syntax and valid interactions that can occur
- CTS2 is not software - it is a “blueprint” for building and using software
- If everyone follows the blueprint (and the blueprint is sufficiently precise) then CTS2 clients and services can interoperate

# CTS2 Standard as a Blueprint

# Key Points

- **Based on Representational State Transfer Architectural Paradigm**
- **Heavily influenced by BioPortal and BioPortal REST API**
- **ORWG and OMV input used for model validation**
- **Modular Implementation – build/use only what you need**
  - **Resources**
  - **Functionality**
  - **Representation**

## Key Points (continued)

- Designed for distribution and federation (!)
- Generic – NOT healthcare specific
- Supports Semantic Web – RDF and OWL2
- Not intended to be constraining
  - Extensions are ok – in fact encouraged!
  - Purpose is not to say what *can* be done, but rather to say how common things can be done consistently

**OMV / CTS2  
Crosswalk**

# **CTS2 CONFORMANCE POINTS**

# CTS2 Conformance Philosophy

- “Linear Value Proposition” (as described by Charlie Meade) – easy things are easy and complexity is proportional to gain
- Implement (or use) exactly what is needed
  - Resources
  - Functionality
  - Representation

# CTS<sub>2</sub> Resource profiles

- **Code System Catalog Entry**
- **Code System Version**
- **Entity Description**
- **Association**
- **Map Catalog Entry**
- **Map Version**
- **Value Set Catalog Entry**
- **Value Set Definition**
- **Concept Domain Catalog**
- **Concept Domain Binding**
- **Statement**

# CTS2 Conformance Points Behavioral Perspective

- **Read – direct access**
- **Query – search and discovery**
- **Import/Export – external formats**
- **Update – incremental update**
- **History – change history**
- **Temporal – state of service at point in time**
- **Maintenance – construct incremental updates**

# CTS2 Conformance Points Representational Perspective

- XML
  - XML Schema
  - ISO 21090\*
- JSON
- RDF\*
- POJO\*

\* Not present in Beta 1.0 Specification

**OMV / CTS2  
Crosswalk**

# **CTS2 / OMV CROSSWALK**

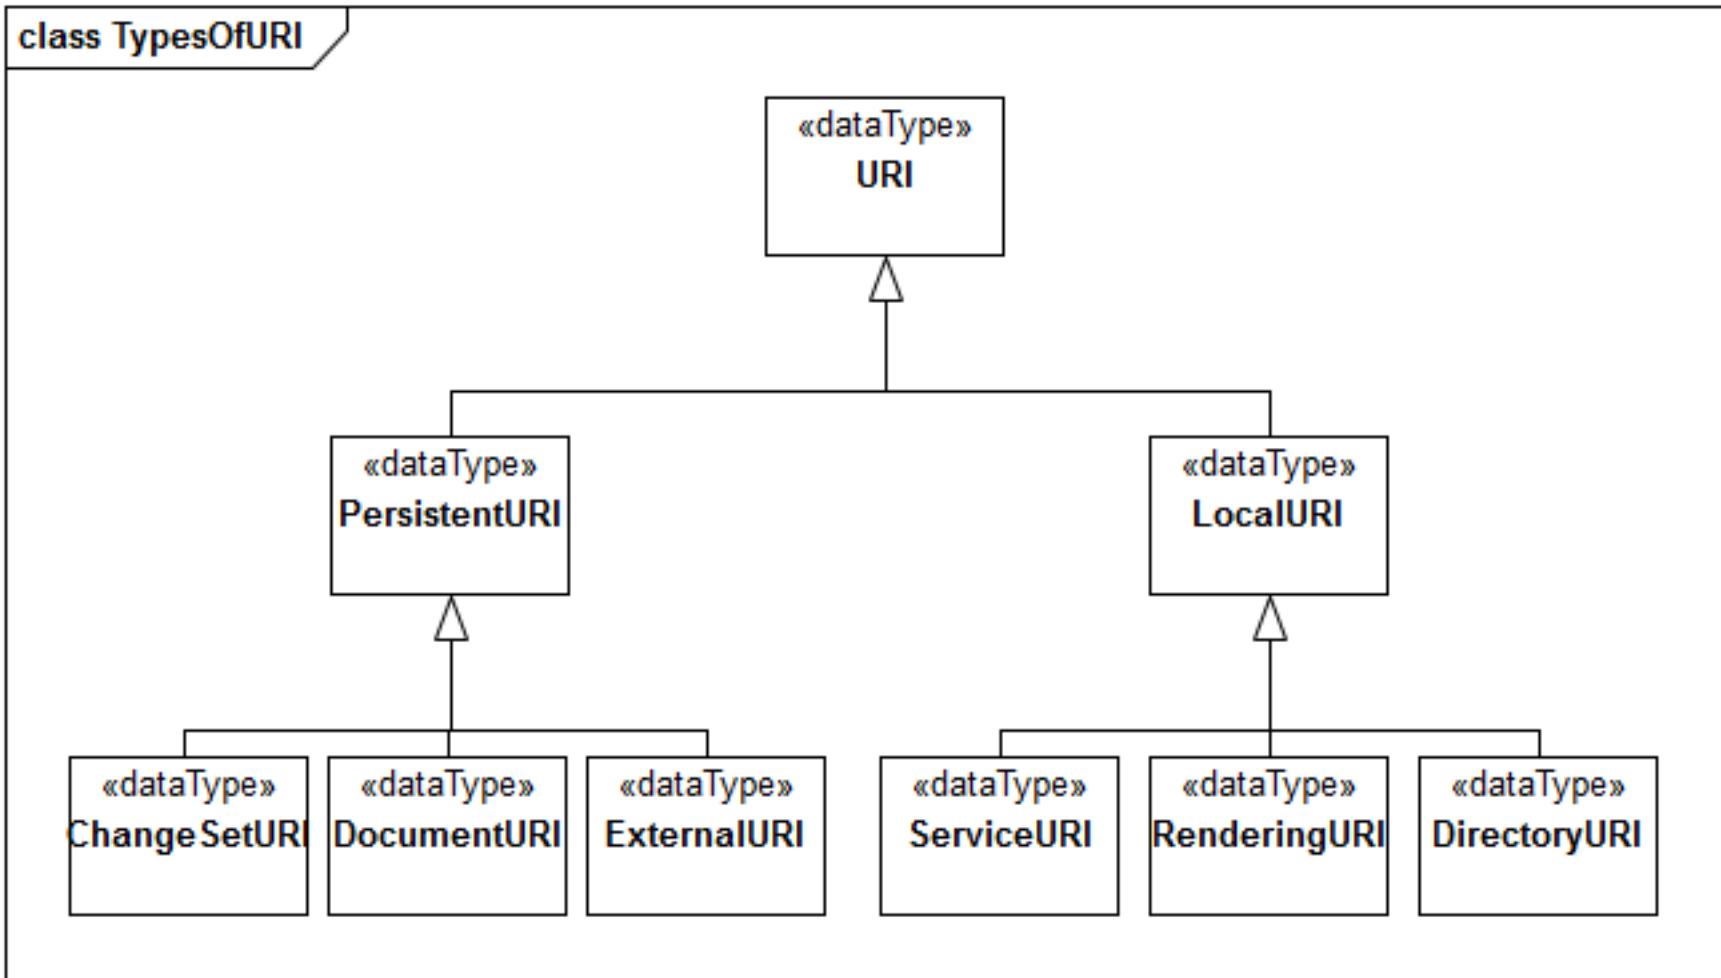

# **CTS2 / OMV Crosswalk Steps**

- 1. A few CTS2 model details**
- 2. CTS2 view on resource / resource version**
- 3. Dive-down into the actual map**

**OMV / CTS2  
Crosswalk**

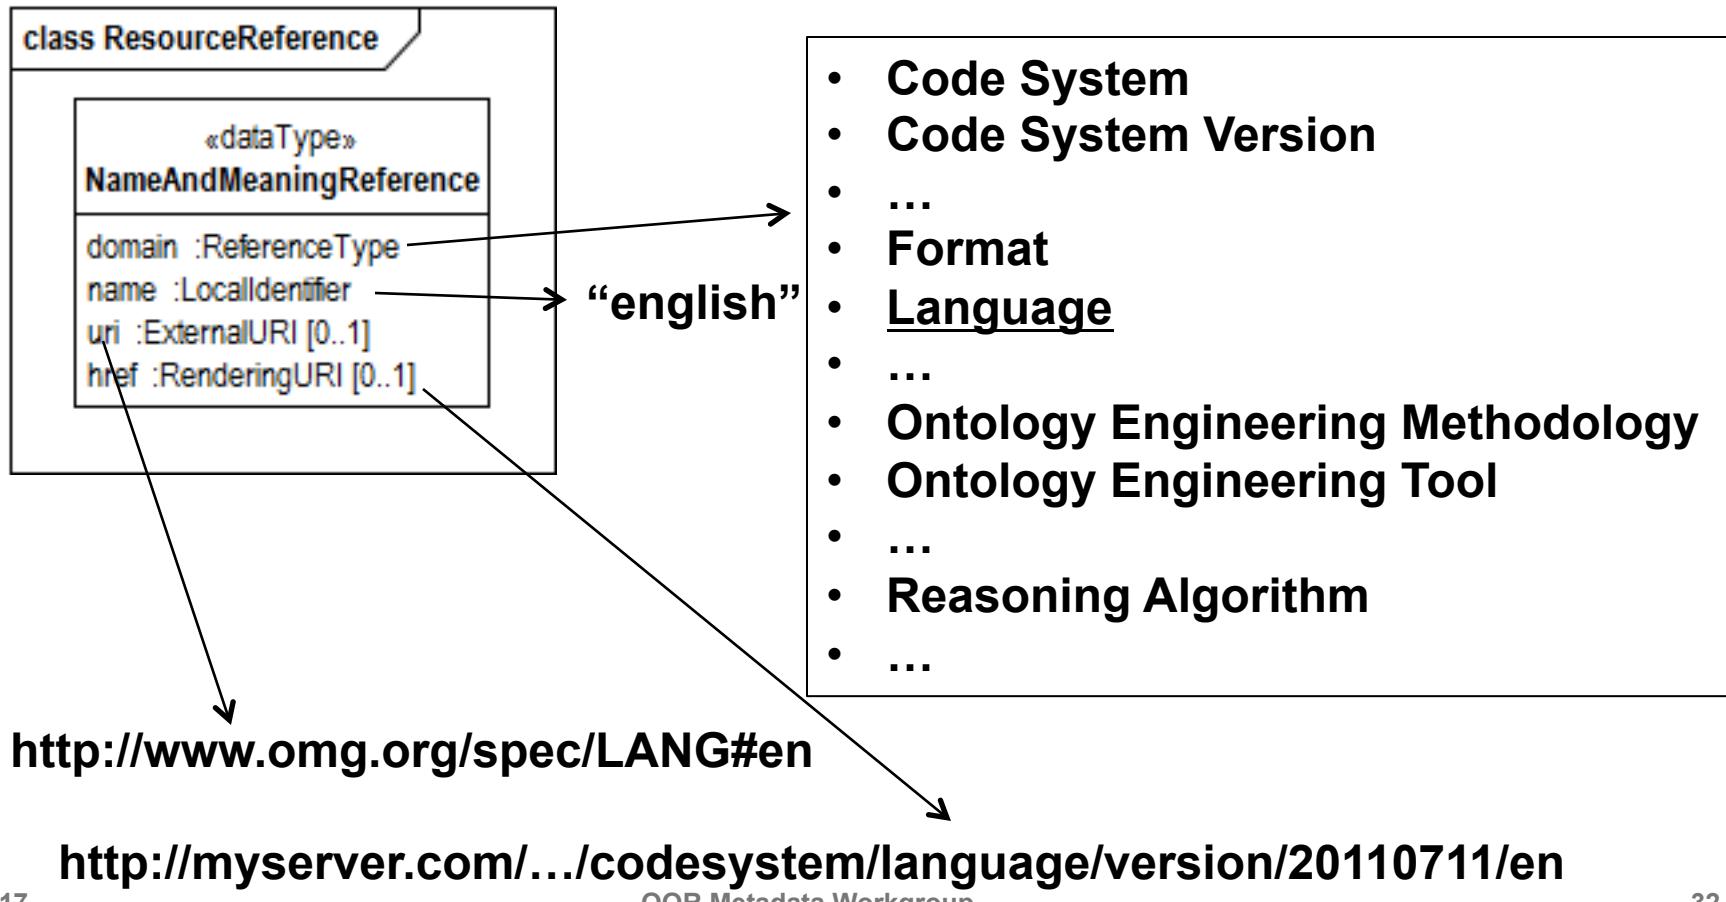

# **1. A FEW CTS2 MODEL DETAILS**

# Types of URI

# NameAndMeaningReference

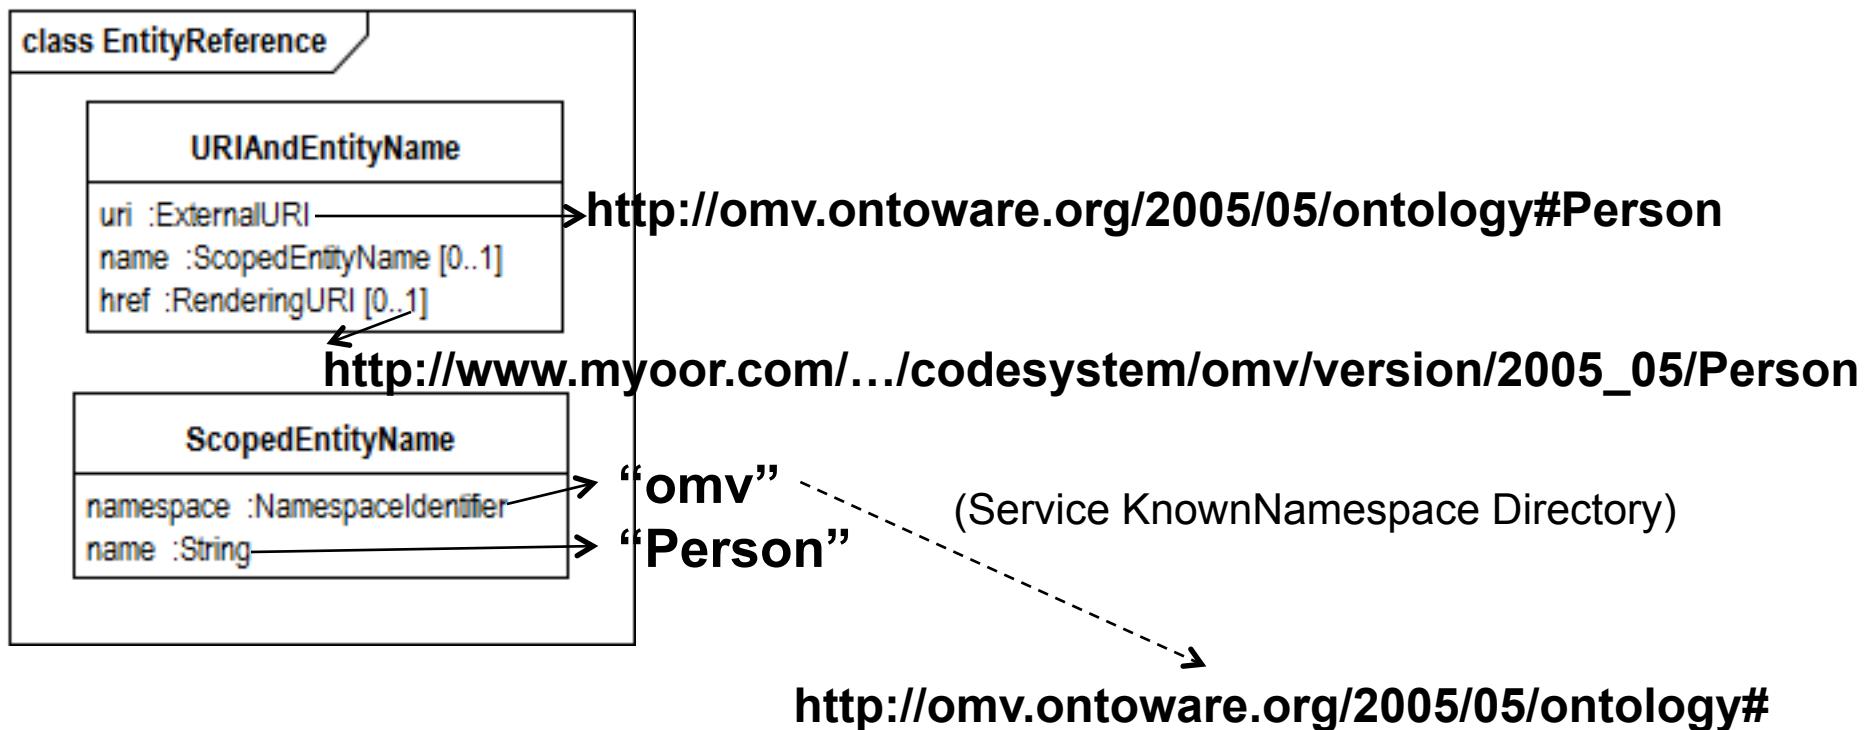

Associates a URI with a local “domain”

# NameAndMeaningReference example

```
<core:resourceType uri="http://www.w3.org/2002/07/owl#Ontology">  
  <core:namespace>owl</core:namespace>  
  <core:name>Ontology</core:name>  
</core:resourceType>
```

# Referencing a class/property/individual in an ontology

# EntityReference Example

```
<core:predicat euri=
http://omv.ontoware.org/2005/05/ontology/
usedOntologyEngineeringTool href = “...”>

<core:namespace>omv</core:namespace>
<core:name>usedOntologyEngineeringTool</core:name>
</core:predicat e>
```

# Resource Description

```
class ResourceDescription
```

/about 1  
/description 0..\*

*Changeable*  
**ResourceDescription**

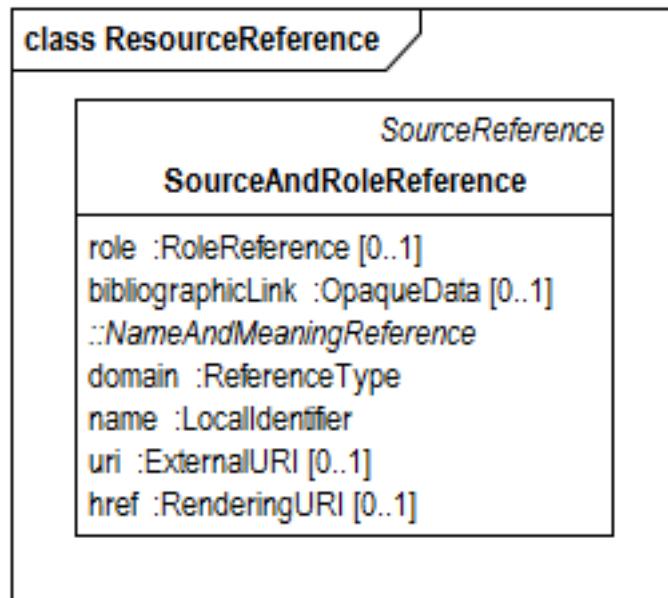

```

# Code System Version to OMV (cont)

# OMV and CTS2 Summary of Differences

- **Abstract vs. Resource Version**
  - CTS2 – 1..\*
  - OMV - 1..1
- **Naming**
  - CTS2 – nouns only / pref to DC, SKOS etc.
  - OMV – mixture of nouns and verbs / OMV specific
- **Model Scope**
  - OMV – includes models of Party, Person Location, etc.
  - CTS2 – out of scope. Simple URI reference

# OMV and CTS2 Summary of Differences (cont)

- “Value sets”
  - OMV – model for **FormalityLevel**, **OntologyTask**, **OntologyType**, etc.
  - CTS2 – referenced by type/URI tuple (**NameAndMeaning**). Additional information available in *EntityDescription* part of service if needed.
- Source and Role
  - OMV – **hasCreator**, **hasContributor**, **endorsedBy**
  - CTS2 – **SourceAndRole** – URI for source and URI (typically drawn from DC) for role of source

# OMV and CTS2 Summary of Differences (cont)

- **Unmapped OMV fields**

- **numberOfAxioms** – lacks consistent semantic interpretation and no examples present
- **hasFormalityLevel** – CTS2/OMWG had difficult aligning w/ existing content. CTS2 is coarser – skos:conceptScheme or owl:Ontology
- **isBackwardCompatibleWith, isIncompatibleWith** – CTS2 community found (almost) no examples and saw no significant application
- **keyClasses** – rarely available, almost always == root classes
- **knownUsage** – thought to be of value, but was considered to be too fluid / specific to be part of catalog. (May be reconsidered)
- **usesOntologyEngineeringMethodology** – omitted for lack of reference value set and need of further discussion

# OMV and CTS2 Summary of Differences (cont)

**Note on unmapped fields:**

**CTS2 has “property” attribute (predicate / target) [0..\*] that covers the “none of the above”**

# OMV and CTS2 Summary of Differences (cont)

- ‘Canonical RDF’
  - CTS2 will defer to DC / SKOS / OWL / FOAF tags when overlaps exist

**OMV / CTS2  
Crosswalk**

# **CURRENT STATE AND NEXT STEPS**

# Current State CTS2 Specification

- CTS2 PIM / HTTP REST PSM adopted as OMG standard in June
- OMG FTF - Finalization Task Force Report due in April
  - Error correction and clarification (finish Z, much more documentation)

# Current State CTS2 Implementation Guides

- IHTSDO (SNOMED-CT) has formed a group to develop the SNOMED-CT CTS2 Implementation Guide
  - Target draft document Mar 2012
- HL7 CTS2 Implementation Guide
- Targeting RDF/OWL implementation guide middle of 2012
